Certification

Pursuant to the requirements of the Pennsylvania Land Recycling and Environmental Remediation Standards Act (Act 2), adopted May 19, 1995, which states:

Interpretation of geologic and hydrogeologic data shall be prepared by a professional geologist licensed in this Commonwealth.

I hereby attest that, as a Professional Geologist licensed in the Commonwealth of Pennsylvania, I am familiar with, and have reviewed and/or prepared the interpretation of the geology and hydrogeology presented in the attached report entitled, *Release Investigation Report – Tank Group 06 and Tank Group 07, Former Philadelphia Energy Solutions Refinery, 3144 West Passyunk Avenue, Philadelphia, Pennsylvania*, dated November 2025.

Based on the available data represented in the report, I believe that the geologic and hydrogeologic interpretations made herein are reasonable and accurate.

1 Introduction

Terraphase Engineering Inc. (Terraphase) has prepared this *Release Investigation Report* (the "Report"), on behalf of Bellwether District Holdings, LLC (BDH), formerly known as Philadelphia Energy Solutions Refining and Marketing LLC (PESRM), to detail the results of Site Assessment and Site Characterization activities performed at Tank Group 06 and Tank Group 07 (the "Site") which is located within the Former Philadelphia Energy Solutions refinery facility (the "Facility"). The Facility, which is undergoing closure activities and redevelopment, is located at 3144 West Passyunk Avenue, Philadelphia, Pennsylvania (**Figure 1**). Remediation activities are being conducted at the Facility under the Pennsylvania Land Recycling and Environmental Remediation Standards Act (Act 2) by both BDH and Evergreen Resources Group, LLC (Evergreen)[1] in accordance with the Consent Order and Agreement (CO&A) among Pennsylvania Department of Environmental Protection (PADEP), Sunoco, Inc. (R&M) n/k/a Energy Transfer (R&M), LLC, and BDH dated August 14, 2012 and the 2020 First Amendment to that Agreement (2020 Amendment). In accordance with the CO&A, Sunoco/Evergreen is responsible for addressing contamination at the Facility resulting from release(s) which occurred before September 8, 2012, i.e., "Pre-Existing Contamination," and PESRM, now known as BDH, is responsible for addressing contamination at the Facility resulting from release(s) which occurred after September 8, 2012, i.e., "Post-September 2012 Contamination."

The Site Assessment and Site Characterization activities described in this Report were performed in accordance with the applicable provisions of The Storage Tank and Spill Prevention Act (Act 32), Title 25 of the Pennsylvania Code (25 Pa. Code) Chapter 245 (Subchapter D), and Terraphase's (2021) *Aboveground Storage Tank Closure Work Plan* (Work Plan), which was approved by the PADEP on April 23, 2021. As discussed in the Work Plan, closure of the aboveground storage tanks (AST) under Act 32 is being pursued through a group closure process, in which ASTs in the same general area (e.g., tank farm) have been demolished, removed, investigated, and evaluated at about the same time. Demolition of the tanks has been proceeding in phases from the north to the south with nine Tank Groups in all. As of May 2023, all tanks subject to closure under Act 32 as part of the Work Plan were demolished.

The data collected as part of the Site Assessment and Site Characterization activities have been evaluated in the context of other information and environmental analytical data for the Facility to determine whether contamination detected during Site Assessment and Site Characterization sampling is (1) Pre-Existing Contamination, (2) Post-September 2012 Contamination associated with a release from an AST, or (3) Post-September 2012 Contamination not associated with a release from an AST. Pre-Existing Contamination will be addressed by Evergreen under its sitewide Act 2 case. Post-September 2012 Contamination, not associated with a release from an AST, will be addressed by BDH under Act 2. Post-September 2012 Contamination associated with a release from an AST will be addressed by BDH under Act 32.

[1] Philadelphia Refinery Operations, a series of Evergreen Resources Group, LLC ("Evergreen") is managing the legacy remedial work for Sunoco (R&M), LLC. For clarity, Sunoco, Inc. n/k/a ETC Sunoco Holdings LLC, Sunoco, Inc. (R&M) f/k/a Sunoco (R&M), LLC n/k/a Energy Transfer (R&M), LLC effective 4/19/2021 and Evergreen shall be referred to collectively as "Evergreen" in this Report.

The Work Plan (Terraphase 2021) also detailed a tank category system, in which tanks are classified into one of the following three categories:

- **Category 1.** Tanks less than or equal to 21,000 gallons and have no evidence of a release to the environment.
- **Category 2.** Tanks greater than 21,000 gallons and have no evidence of a release to the environment.
- **Category 3.** Tanks that have evidence of a release to the environment identified during infrastructure removal or sampling.

Tanks were initially classified as Categories 1 or 2. Category 1 tanks were inspected visually during demolition for release(s) to the environment. Category 2 tanks were inspected visually, and a Site Assessment sampling program was initiated at each tank. If indications of a release were identified through visual observation or sampling, the tank was reassigned to Category 3. Category 3 tank areas were sampled to characterize the nature and extent of contaminants and assess the need for remedial or interim actions.

Tank Groups 06 and 07 (**Figure 2**) are located within a larger area of the Facility formerly referred to as Girard Point. Evergreen is currently engaged in characterization and remediation work at the Facility under the Pennsylvania One Cleanup Program under the oversight of the PADEP and the United States Environmental Protection Agency (USEPA; eFACTS PF No. 769099 [AOI 6], 750870 [AOI 7], and 780190 [Philadelphia Refinery Sitewide]). In its associated documentation, Evergreen has identified the area of the Facility where Tank Group 06 is located as Area of Interest (AOI) 7, and the area of the Facility where Tank Group 07 is located as AOI 6. The 42[2] ASTs addressed in this Report are shown on **Figure 3** and listed in **Table 1**.

Table 1 includes two tanks (i.e., GP R 250 and GP R 251) located within what is referred to as Tank Group 07A. These two tanks were addressed separately from Tank Group 07 due to standing shallow groundwater which prevented sampling in accordance with the Work Plan (Terraphase 2021). Following consultation with PADEP, alternative sampling was conducted. The *Tank Group 07A Closure Report*, prepared by Terraphase on behalf of BDH, was submitted to PADEP on February 20, 2024. PADEP reviewed and agreed on May 2, 2024 that the T*ank Group 07A Closure Report* demonstrated clean closure of these two tanks. PADEP requested that the T*ank Group 07A Closure Report* be included as an appendix to this Report to capture information for the Tank Group 07 tanks in total. At the request of PADEP, the *Tank Group 07A Closure Report* and email correspondence with PADEP are included in **Appendix A**. As such, the specific details and sampling associated with these two tanks will not be discussed herein.

Eleven tanks were initially categorized as Category 1 (i.e., GP R 2000, GP U 1158, GP U 894, GP R 3003, GP R 3101A, GP R 2500, GP R 2501, GP 75A, GP 76A, GP 77A, and GP 78A) within Tank Group 06 and three tanks were initially categorized as Category 1 (i.e., GP R 796, GP U 1221, and GP 79A) within Tank Group 07. Since these tanks showed no signs of release during demolition and remain classified as

[2] 25 ASTs are located in Tank Group 06, 15 ASTs are located in Tank Group 07, and 2 tanks are located in Tank Group 07A (see Appendix A for more details regarding Tank Group 07A).

Category 1, in accordance with the Work Plan (Terraphase 2021), the Site Assessment for these tanks is considered complete. The Site Assessment outcome category for these 14 tanks is "No Obvious Contamination – Sample Results Meet Action Levels." Based on the Site Assessment outcome category for the 14 Category 1 tanks, no additional Site Assessment or Site Characterization activities were needed for these tanks.

This Report presents the results of the Site Assessment and Site Characterization activities performed for the remaining 28[3] ASTs. It identifies those ASTs where potential releases to the environment were (and were not) identified based upon a comparison of the soil analytical results to the following Non-Residential (Non-Res) Statewide Health Standard (SHS) Medium-Specific Concentration (MSC) numeric values for soil:

- Non-Res MSCs for Direct Contact (DC) Exposure to Surface Soil (0-2 feet [ft])
- Non-Res MSCs for DC Exposure to Subsurface Soil (2-15 ft)
- Non-Res MSCs for Soil to Groundwater (SGW) (Used Aquifer, Total Dissolved Solids [TDS] ≤ 2,500)

Soil characterization results for five ASTs (i.e., GP R 272, GP R 286, GP R 973, GP R 1039, and GP R 1047) in Tank Group 06 and three ASTs (i.e., GP R 250, GP R 251, and GP R 1088) in Tank Group 07 did not identify concentrations of regulated substances greater than these applicable SHS MSCs. As such, these six ASTs have "No Obvious Contamination – Sampling Results Meet Standards/Levels" and are considered to have met the closure and requirements set for in Act 32.

The remaining 20 ASTs – specifically, 9 in Tank Group 06 (i.e., GP R 270, GP R 273, GP R 276, GP R 281, GP R 282, GP R 284, GP R 285, GP R 1038, and GP R 1101) and 11 in Tank Group 07 (i.e., GP R 494, GP U 767, GP R 790, GP R 791, GP R 792, GP R 793, GP R 794, GP R 798, GP R 799, GP R 1116, and GP R 1117) – exhibited soil concentrations of regulated substances greater than these applicable SHS MSCs. Therefore the conclusion for these tanks is "No Obvious Contamination – Sample Results Do Not Meet Action Levels." Notification was made to PADEP of potential releases to the environment and Incident No. 58434 and 57973 were assigned to Tank Group 06 and Tank Group 07, respectively, by PADEP.

For the 20 ASTs where potential releases to the environment were identified, Site Characterization was completed to determine 1) the sources of contamination (per 25 Pa. Code § 245.309(a)(4)), 2) whether the identified contamination is Pre-Existing Contamination, and 3) the extent of migration of regulated substances in soil and groundwater (per 25 Pa. Code § 245.309(b)(4)).

For these ASTs, the extent of soil and groundwater concentrations of regulated substances have been delineated to the following Non-Res SHS MSC numeric values:

<u>Soil</u>

- Non-Res MSCs for DC Exposure to Surface Soil (0-2 ft)
- Non-Res MSCs for DC Exposure to Subsurface Soil (2-15 ft)
- Non-Res MSCs for SGW for Used Aquifers (TDS ≤ 2,500)

[3] 14 ASTs in Tank Group 06, 12 ASTs in Tank Group 07, and 2 ASTs in Tank Group 07A.

Groundwater

- Non-Res MSCs for Groundwater (GW) Exposure for Used Aquifers (UA) (TDS ≤ 2,500)

The presence of light non-aqueous phase liquid (LNAPL) in the area has also been defined based upon measurements collected during recent gauging events for monitoring wells within, and in the vicinity of, Tank Group 06 and 07.

Based on the Site Assessment and Site Characterization data collected by BDH and data collected by Evergreen near Tank Group 06 and 07, the contamination identified in the area of Tank Group 06 and 07 represents Pre-Existing Contamination. No evidence of Post-September 2012 Contamination has been identified during the Site Assessment and Site Characterization sampling. As such, the contamination will be addressed under Act 2 by Evergreen under their existing Act 2 Sites (eFACTS PF No. 769099 [AOI 6], 750870 [AOI 7], and 780190 [Philadelphia Refinery Sitewide]). **Appendix B** provides a letter from Evergreen documenting their agreement.

As discussed in this Report, sufficient physical data has been collected to:

- Characterize the sources of contamination identified in the area and the extent of regulated substances in soil and groundwater associated with releases to the environment from ASTs;
- Allow for a selection of a Standard for attainment; and
- Determine the need for remedial action and select a remedial alternative.

Because the contamination identified in the area represents Pre-Existing Contamination, the contamination will be addressed by Evergreen under Act 2, and BDH will not be issuing a Remedial Action Plan (RAP) per 25 Pa. Code § 245.311.

Section 2 includes a description of the Site, operational/usage history of the ASTs, and information regarding site topography, geology, hydrogeology, and surface water. This section also includes a summary of known past releases to the environment in the area. **Appendix C** provides the Aboveground Storage Tank System Closure Report forms (2630-FM-BECB0514) for each of the ASTs.

Section 3 discusses the tank infrastructure and removal activities.

Section 4 discusses the results of the Site Assessment and Site Characterization. It documents how adequate characterization has been performed to determine the sources of contamination, the extent of migration of regulated substances in soil and groundwater and provides an ecological screening evaluation. Finally, this section explains the lines of evidence considered in evaluating whether contamination identified in the area is Pre-Existing Contamination or Post-September 2012 Contamination.

Section 5 provides why a specific Standard for attainment has not been identified.

Section 6 provides the conceptual site model which discusses the current and reasonably anticipated future land and groundwater use at and in the vicinity of the Site, provides the scenarios for potential human exposure (i.e., receptors, exposure media, exposure routes), describes the review for the potential presence of threatened and endangered species and/or special concern species, describes the

fate and transport of contaminants, and presents the institutional and engineering controls that may be utilized in the future to manage vapor intrusion exposure.

Section 7 provides a summary of this Report and the conclusions of the Site Assessment/Site Characterization for Tank Group 06 and 07.

Section 8 presents a listing of the documents referenced in this Report.

2 Background

The Facility, a former 1,300-acre refinery, is being redeveloped. The Site[4] is approximately 78 acres[5] in size and is located within an area formerly referred to as Girard Point. Parts of the Site area are also referred to as AOI 6 or AOI 7 by Evergreen as part of their One Cleanup Program effort. The Site is located north of the Platt Bridge, between Lanier Street and the Schuylkill River. Prior to demolition, Tank Group 06 consisted of seven separate areas containing tanks located in the northern portion of the former Girard Point Refinery. Tank Group 07 consisted of five separate areas containing tanks located in the central portion of the former Girard Point Refinery. The areas within both Tank Group 06 and 07 were separated by buildings, large piping structures, parking lots, and plant access roadways. Except for the asphalt roadways and parking areas that cut through portions of the Tank Groups, and the tank foundations themselves, the area was not covered by hardscape.

The 42 ASTs addressed in this Report are listed in **Table 1**. The 25[6] other ASTs (i.e., GP R 271, GP 274, GP 275, GP 1202, GP 1050, GP R 1051, GP 1052, GP 1064, GP 1065, GP 1066, GP 1067, GP 1068, GP 1069, GP C1 1100, GP 1118, GP 1123, GP U 676, GP U 677, GP U 768, GP C2 797, GP 493, GP 495, GP 496, GP 497, and GP 498) were previously closed; as such, are not subject to this closure effort. **Figure 3** provides a layout of the Tank Groups.

Two tanks (i.e., GP R 250 and GP R 251) were previously characterized separately from Tank Group 07 (i.e., Tank Group 07A). The *Tank Group 07A Closure Report*, prepared by Terraphase on behalf of BDH, was submitted to PADEP on February 20, 2024. PADEP reviewed and on May 2, 2024 agreed that the T*ank Group 07A Closure Report* demonstrated clean closure of these two tanks. PADEP requested the T*ank Group 07A Closure Report* be included in this Report as an appendix to capture information for the Tank Group 07 tanks in total. At the request of PADEP, the *Tank Group 07A Closure Report* and email correspondence with PADEP is included in **Appendix A**. As such, further details and sampling associated with these two tanks are not provided in this Report.

2.1 Operational History/Usage of the Tanks

The Facility operated as a petroleum refinery between 1860 and 2019. The refinery ceased operations in 2019. The demolition and decommissioning of the subject ASTs began in March 2022 and September 2021 for Tank Group 06 and Tank Group 07, respectively. Prior to demolition, the primary products held within the Tank Group 06 tanks were: No. 6 fuel oil (GP R 1039), alkyl slurry (GP R 1038), fresh caustic (GP R 1047 and GP R 973), heavy naphtha (GP R 286), light naphtha (GP R 276 and GP R 285), recovered oil (GP R 272, GP R 1101, and GP R 270), and vacuum gas oil (GP R 273, GP R 284, GP R 281, and GP R 282). The primary products held within Tank Group 07 tanks were: benzene (GP R 790, GP R 791, GP R 798, and GP R 799), fresh caustic (GP R 1088), cumene (GP R 792 and GP R 793), main frac bottoms (GP R 494), recovered oil (GP U 767), tetraethylene glycol (TEG) (GP R 794), and udex feed (GP R 1116 and

[4] Tank Group 06 and 7 consists of tank farms referred to by the Facility as the North Tank Field.

[5] Tank Group 06 and 07 are approximately 57 and 21 acres in size, respectively.

[6] 16 ASTs in Tank Group 06 and 9 ASTs in Tank Group 07.

GP R 1117). Additional details regarding the size, contents, and construction of the tanks are provided in **Table 1**.

2.2 Topography

Topography at the Site is generally flat. Regional topography slopes gently to the west towards the Schuylkill River, the nearest water body to the Site. The ground surface elevation in the area of Tank Group 06 and 07 is approximately 3.9 and 7 ft above mean sea level, respectively.[7]

2.3 Regional Geology and Hydrogeology

The Facility is located within the Atlantic Coastal Plain Physiographic Province of Pennsylvania, which is defined as having a flat topography, underlain by unconsolidated sediments that thicken to the southeast. The Coastal Plain deposits are sand, gravel, silt, and clay which drape over crystalline igneous and metamorphic rocks. In general, the resulting sediments are approximately 250 ft thick along the Delaware River. These sediments unconformably overlie older, very complexly deformed rocks of the Piedmont physiographic province. Anthropogenic fill overlies the quaternary-aged Coastal Plain deposits in the vicinity of the Facility. The fill material was placed in the reclamation of lowlands along the banks of the tidal Delaware and Schuylkill Rivers during industrialization.

Native sediments beneath the fill consist of gray, muddy deposits with occasional sand, gravel, and organic-rich lenses. These sediments were deposited in floodplain, channel, and marsh environments through the Holocene Epoch. The most recent deposits are poorly consolidated and below the water table, as a result of their relatively young geologic age and position along the Schuylkill River (tributaries and creeks). Below the Holocene deposits is Pleistocene glacial outwash, commonly referred to as the "Trenton Gravel" along the Delaware River valley. Cretaceous-age sand and clay units making up the Potomac-Raritan-Magothy aquifer system underly the Pleistocene deposits.

The sedimentary record near the Facility consists of a complex series of water-bearing sand units which can comprise one or more hydrostatic units. Previous investigations conducted at the Facility have identified two saturated zones – specifically, an unconfined shallow groundwater unit (occurring within the Holocene and Trenton Gravel deposits) and a deep groundwater unit known as the Farrington Sand, which is part of the Potomac-Raritan-Magothy aquifer system. The deeper groundwater unit is separated by a clay unit; as such, the deeper groundwater has been classified as a semi-confined aquifer.

Appendix D provides select figures from the *Remedial Investigation Report, Area of Interest 6* (AOI 6 RIR; GHD 2017c) and *Remedial Investigation Report, Area of Interest 7* (AOI 7 RIR; GHD 2017a) for reference. This includes Figure 8 from both RIRs, which provides a detailed cross section of the subsurface in the area from north to south in Tank Group 06 and 07, respectively.

[7] North American Vertical Datum of 1988.

2.4 Local Geology and Hydrogeology

The Site Assessment and Site Characterization soil investigations primarily targeted the top 5 ft, with certain Site Characterization investigation borings advanced to depths to 15 ft below ground surface (bgs) to vertically characterize the extent of constituents of concern (COC) in soil in both Tank Group 06 and 07. Monitoring wells were installed to depths of up to 15 ft bgs in Tank Group 06 and up to 13 ft bgs in Tank Group 07 during the Site Characterization. Anthropogenic fill was observed in soil cores collected from most of the soil borings installed in Tank Group 06 at thicknesses up to 5 ft. The native soil beneath the fill layer generally consists of brown, black, and gray sands and silt. During Site Assessment soil sampling, saturated soil was not encountered in Tank Group 06. Anthropogenic fill was observed in soil cores collected from most of the soil borings installed in Tank Group 07 at thicknesses up to 15 ft. The native soil beneath the fill layer generally consists of brown to gray sand, clay, and silt. During Site Assessment soil sampling, saturated soil was not encountered from 0-5 ft bgs. Due to seasonal change in groundwater elevations, saturated soils were encountered during Site Characterization sampling as shallow as 0.5 ft bgs in Tank Group 07. In accordance with 25 Pa. Code § 245.310(a)(14), boring and well construction logs for soil borings and monitoring wells installed by BDH during Site Assessment and Site Characterization in Tank Group 06 and 07 are provided in **Appendix E**.

Groundwater in the unconfined aquifer has generally been first encountered in Tank Group 06 at depths of approximately 0.2 to 18 ft bgs (GHD 2017a). Groundwater in the unconfined aquifer has generally been first encountered in Tank Group 07 at depths of approximately 0.5 to 6 ft bgs (GHD 2017c). During Site Characterization activities conducted by BDH in Tank Group 06 and 07, unconfined aquifer groundwater was encountered between approximately 1.5 and 7 ft bgs and 0.5 and 6.5 ft bgs, respectively.

Mounding in the unconfined aquifer has been noted to be present in Tank Group 06 (within AOI 7) adjacent to the bulkhead and in the southeast portion of the AOI as presented on Figure 14 of the AOI 7 RIR (GHD 2017a; included in **Appendix D**). The AOI 7 RIR attributes the mounding along bulkhead as a result of the lower hydraulic conductivity of the bulkhead compared to the soil in the area. The mounding in the southeast portion of the AOI may be due to lower permeability soil beneath the tanks.

Similarly, mounding in the unconfined aquifer has been noted to be present in Tank Group 07 (within AOI 6) adjacent to the bulkhead and in the southeast portion of the AOI as presented on Figure 14 of the AOI 6 RIR (GHD 2017c, included in **Appendix D**). The AOI 6 RIR also attributes the mounding along bulkhead as a result of the lower hydraulic conductivity of the bulkhead compared to the soil in the area.

Groundwater at the refinery has historically been interpreted to flow to the west and north (in the area of Tank Group 06) and to the southwest (in the area of Tank Group 07) toward the Schuylkill River. However, based on Figure 2-3-29 of the *Sitewide Fate and Transport Remedial Investigation Report* (2025 Fate and Transport RIR; Stantec 2025a; included in **Appendix D**), groundwater flow in the unconfined aquifer in both Tank Group 06 and 07 flows radially due to mounding as described above.

Based on gauging events performed by Evergreen between February and April 2023, groundwater flow in the unconfined aquifer in Tank Group 06 is consistent with historical and current gauging data and

interpretation (GHD 2017d, Stantec 2025a) and generally directed to the west and north, with some mounding in the southwestern portion of the area near Tank Group 07.

Based on gauging events performed by Terraphase on January 3 and February 8, 2023 in Tank Group 07 (see Section 4.2.2), consistent with Evergreen's gauging data and interpretation (GHD 2017d, Stantec 2025a), groundwater flow in the unconfined aquifer in Tank Group 07 is generally directed to the southwest. In accordance with 25 Pa. Code § 245.310(a)(16), **Figure 4** provides an illustration of the interpreted groundwater flow regime in the unconfined aquifer including data collected by Evergreen.

2.5 Surface Water

The nearest surface water body is the Schuylkill River which bounds the Site to the north and west, and at its closest point is approximately 25 ft from Tank Group 06 and 50 ft from Tank Group 07. As described in Section 2.4, the AOI 6 RIR (GHD 2017c) and the AOI 7 RIR (GHD 2017a), unconfined aquifer groundwater flow is generally to the west and north (in the area of Tank Group 06) and to the southwest (in the area of Tank Group 07) toward the confluence of the Delaware and Schuylkill Rivers. Stormwater detention/retention basins were identified adjacent to the east of Tank Group 06 and 07, but no wetlands were identified within the bounds of the Tank Groups. In accordance with 25 Pa. Code § 250.309 and § 250.406, as referenced by 25 Pa. Code § 245.310(a)(29), and as discussed in detail in Section 4.3.1.2, groundwater contamination has been delineated to Non-Res MSCs and the extent of LNAPL has been defined in the area of Tank Group 06 and 07. As such, groundwater contamination associated with potential release(s) from ASTs in Tank Group 06 and 07 does not impact the Schuylkill River.

2.6 Known Past Releases to the Environment

Pre-Existing Contamination is known to be present in this area of the Facility and must be considered when interpreting the Site Assessment and Site Characterization results for Tank Group 06 and 07. This section provides a discussion of past releases and potential other sources of contamination in the Tank Group areas.

Previous investigations performed by Evergreen in Tank Group 06 are discussed in:

- GHD's 2017 AOI 7 RIR;
- GHD's 2017 *Site Characterization Report/Remedial Action Completion Report for Aboveground Storage Tanks 270, 271, 272, 273, 275, 277, 281, 1002, 1100, and 1108; Incident No. 40386, 6134, 45686, 45699, 29142, 45694, 42279, 45697, 45689, 38132, 30777, 5913, 36456, 36578, 45700 and Underground Storage Tanks M-004 and M-005* (AOI 7 SCR/RACR); and
- Stantec's 2009 *Tank GP 270 Release – Site Characterization Letter Report* (GP 270 SCLR).

These reports identified known prior releases from three ASTs in Tank Group 06: (1) Tank GP R 270 (Incident No. 40386), (2) Tank GP R 273 (Incident No. 45697), and (3) Tank GP R 281 (Incident Nos. 5913 and 30777). A prior release associated with GP R 270 of approximately 2,720 gallons of recovered oil was reported to PADEP on June 28, 2009 (Incident No. 40386). A prior release associated with GP R 273

of approximately 78 gallons of vacuum gas oil was reported to PADEP on June 6, 1995. The two prior releases associated with GP R 281 were reported to PADEP in September 1999 (Incident No. 30777) and in November 2001 (Incident No. 5913). The September 1999 incident involved the release of approximately 84 gallons of vacuum gas oil, and the November 2001 incident involved the release of approximately 200 gallons of vacuum gas oil. In addition to soil contamination, these releases have resulted in groundwater contamination (including LNAPL) that is present or that has migrated to within the bounds of Tank Group 06. Contamination from these releases is Pre-Existing Contamination.

Prior investigations performed by Evergreen in the Tank Group 07 area are discussed in:

- Geosyntec Consultants, Inc.'s (Geosyntec) *2023 Pilot Test Report Former Philadelphia Refinery AOI 6 Girard Point*;
- Aquaterra Technologies Inc.'s (Aquaterra) 2024 *AOI 6 – Area West of 700 Series Tanks LNAPL Remediation Technical Memorandum*;
- Sanborn, Head & Associates, Inc.'s (Sanborn Head) 2025 *Volume 3 – Sitewide Human Health Risk Assessment of the Sitewide Fate and Transport Remedial Investigation Report, Human Health Risk Assessment & Cleanup Plan* (Sitewide HHRA); and
- Sanborn Head's 2025 *Volume 4 – Sitewide Human Health Risk Assessment Addendum and Cleanup Plan* (Sitewide CP).

Pre-Existing Contamination is known to be located near the 700 Series Tanks (tanks GP R 790 through GP R 794, GP R 796, GP R 798, and GP R 799). Evergreen conducted a remediation pilot study test in this area in October 2022 focused on reducing groundwater concentrations of dissolved petroleum compounds and LNAPL. Pre-Existing LNAPL was regularly observed and recovered by Evergreen in monitoring wells near the 700 Series Tanks (wells B-192 through B-195 and B-150; Aquaterra 2024b). **Figure 5** shows the estimated extent of Pre-Existing LNAPL near the 700 Series Tanks.

Appendix F provides tables of soil and groundwater analytical results from investigations conducted by Evergreen prior to Site Assessment and Site Characterization sampling by BDH.

In addition to these known and suspected discrete releases, the Facility was used for petroleum storage and refining for over a century, and both localized and diffuse contamination is present throughout the Facility associated with this past industrial use and with land filling activities (i.e., historic fill[8]). It is important to consider the presence of this contamination in interpreting the Site Assessment and Site Characterization results for Tank Group 06 and 07.

[8] "Historic fill", which is defined by PADEP in their (2021c) *Management of Fill Policy*, is material, excluding material disposed in landfills, waste piles and impoundments, used to bring an area to grade prior to 1988, and consisting of a conglomeration of soil and residuals, such as ashes from the residential burning of wood and coal, incinerator ash, coal ash, slag, dredged material and construction and demolition waste.

3 Tank Infrastructure and Removal

In accordance with the Work Plan (Terraphase 2021), Northstar Contracting Group, Inc. (NorthStar) and its subcontractors, JD2 Environmental, Inc. (JD2) and AST Construction, Inc., PADEP-certified Aboveground Field Constructed Storage Tank System Removal contractors, were retained by BDH to perform tank demolition and handling, including (1) hazard recognition and abatement; (2) removal and handling of vapors, product, wastewaters, and accumulated sludges; (3) overseeing or verifying cleaning of the storage tank system; (4) dismantling the ASTs; and (5) removal of ancillary equipment and piping.

The demolition of the 14 Tank Group 06 ASTs began in March 2022 and was completed in May 2023:

- GP R 1039 (PADEP No. 049A)
- GP R 1038 (PADEP No. 050A)
- GP R 1047 (PADEP No. 011A)
- GP R 973 (PADEP No. 066A)
- GP R 286 (PADEP No. 028A)
- GP R 276 (PADEP No. 023A)
- GP R 281 (PADEP No. 025A)
- GP R 285 (PADEP No. 027A)
- GP R 270 (PADEP No. 021A)
- GP R 272 (PADEP No. 022A)
- GP R 1101 (PADEP No. 047A)
- GP R 273 (PADEP No. 003A)
- GP R 284 (PADEP No. 004A)
- GP R 282 (PADEP No. 026A)

The demolition of the 12 Tank Group 07 ASTs began in September 2021 and was completed in July 2022:

- GP R 1117 (PADEP No. 005A)
- GP R 791 (PADEP No. 006A)
- GP R 798 (PADEP No. 007A)
- GP R 494 (PADEP No. 029A)
- GP R 1116 (PADEP No. 030A)
- GP R 1088 (PADEP No. 033A)
- GP R 250 (PADEP No. 019A)[9]
- GP R 790 (PADEP No. 034A)
- GP R 792 (PADEP No. 035A)
- GP R 793 (PADEP No. 036A)
- GP R 794 (PADEP No. 037A)
- GP R 799 (PADEP No. 039A)
- GP U 767 (PADEP No. 046A)
- GP R 251 (PADEP No. 020A)[12]

During the removal, it was determined that Tank Group 06 tanks GP R 286, GP R 276, GP R 285, GP R 270, GP R 272, GP R 284, GP R 281, and GP R 282 had thick concrete tank foundations, GP R 273 had a double bottom, and Tank Group 07 tanks GP R 792, GP R 794, and GP R 1116 had double bottoms Double bottoms are forms of secondary containment located under the tanks that allow for visual inspection and potential repair to any observed leaks. BDH retained ENTACT, LLC (ENTACT) to remove the double bottoms.[10] Removal of double bottoms was completed by ENTACT in Tank Group 06 in August 2022 and in Tank Group 07 in July 2022.

[9] Associated with Tank Group 07A.

[10] Due to some double bottoms not being removed until after the completion of Site Assessment and Site Characterization sampling in Tank Group 06, some proposed Site Assessment samples located within the former tank boundary could not be sampled. The Site Characterization scope sampled additional locations around the former tank boundary to ensure full characterization of the tank to account for this.

During the performance of Site Assessment sampling, the concrete foundations associated with certain ASTs were partially removed to allow access for sampling. During this effort, free product and water were encountered beneath the concrete pad at GP R 281 in Tank Group 06. Further details regarding interim remedial response are described in Section 4.1. Based upon these observations, PADEP was notified on January 12, 2023 of a potential release from this AST to the environment. As discussed further in Section 4.3, three additional notifications of release were reported for Tank Group 06 and two notifications of release were reported for Tank Group 07.

On behalf of BDH, JD2 submitted to PADEP the required tank registration amendments, copies of which are provided as **Appendix G**.

In accordance with 25 Pa. Code § 245.309(a) and (b)(3), as referenced by 25 Pa. Code § 245.310(a), the Aboveground Storage Tank System Closure Report forms (2630-FM-BECB0514) were previously submitted on June 30, 2023 and February 6, 2023 for Tank Group 06 and 07, respectively, and are included as **Appendix C**.

Pursuant to 25 Pa. Code Section 245.310(a)(11), field personnel involved with AST closure activities described in this Report have completed work in accordance with site-specific plans which were implemented in accordance with Occupational Safety and Health Administration requirements in 29 Code of Federal Regulations 1910.120. Each consultant, contractor, subcontractor, and third-party company performing fieldwork associated with the AST closure activities was required to prepare its own site-specific health and safety plan.

4 Site Assessment and Site Characterization

This section discusses the results of the Site Assessment and Site Characterization activities performed following the identification of potential releases to the environment from the Tank Group 06 and 07 ASTs.

Section 4.1 describes the Site Assessment sampling and analysis methods that were performed by BDH. Section 4.2 discusses the subsequent Site Characterization sampling. Section 4.3 discusses the soil analytical results and documents the approach to allocate soil and groundwater contamination (including LNAPL, if applicable) to (1) Pre-Existing Contamination, (2) Post-September 2012 Contamination associated with a release from an AST, or (3) Post-September 2012 Contamination not associated with a release from an AST.

4.1 Site Assessment

The Site Assessment soil sampling was performed by Ransom Consulting, LLC (Ransom) and their subcontractor TPI Environmental, LLC (TPI). In total, the effort involved the installation of 111 soil borings and the collection of 116 soil samples (which include five duplicate samples) in Tank Group 06. The effort involved the installation of 95 soil borings and the collection of 100 soil samples (which include five duplicate samples) in Tank Group 07. Prior to the initiation of the sampling activities, the Pennsylvania One Call System (811 Dig Safe) was contacted to identify underground utilities at the Site. In addition, a review of available information provided by facility representatives regarding the presence/absence of underground utilities was used in the selection of sampling locations. Finally, a private utility locater was retained to use geophysical and electromagnetic techniques to identify potential utilities or subsurface structures at proposed drilling locations.

As discussed in the Work Plan (Terraphase 2021), when no evidence of a release to the environment was identified during tank removal, ASTs were subject to Site Assessment sampling using a grid-based approach with additional samples biased toward the locations of pipe connections or other key infrastructure. The Site Assessment sampling was conducted between December 6, 2022 and December 5, 2023 in Tank Group 06 and between July 18, 2022 and August 15, 2022 in Tank Group 07.

In accordance with the approved Work Plan, soil borings were completed using direct-push (i.e., Geoprobe) drilling or hand auger methods and advanced through the top 5 ft of soil. Continuous soil cores were collected, and field screened using a photoionization detector (PID) to identify potentially impacted zones. Soil sampling intervals were selected based on the results of field screening (i.e., staining, odors, and elevated PID readings). Where potentially impacted materials were not encountered, discrete samples were collected at a depth of 3.0-3.5 ft bgs consistent with the Confirmatory Sampling Protocol detailed in PADEP's (2021b) *Closure Requirements for Aboveground Storage Tank Systems* which requires sampling "*at least one foot below underground product piping, two feet below product dispensers, remote fills or containment structures and aboveground product lines for AST, and three feet below the tank*." Where fill was observed, samples of the fill were collected if it consisted of soil or soil-like material. Groundwater was not encountered during the installation of these soil borings.

During the Site Assessment, the concrete foundations associated with certain ASTs were partially removed to allow access for sampling. During this effort, free product and water were encountered beneath the concrete pad at GP R 281, which previously contained vacuum gas oil, in Tank Group 06. This tank was re-classified as Category 3. The free product was contained within the ring wall of the tank foundation. BDH collected a sample of the free product and the analytical results are provided in **Appendix H**. Following this initial discovery of the free product, the facility demolition contractor initiated interim measures to recover the observed free product and ponded water from beneath the tank foundation. ACV Enviro, on behalf of Aquaterra, recovered approximately 4,000 gallons of LNAPL impacted water, which was stored in a dedicated frac tank at the Facility and later disposed of off-Facility (Aquaterra 2024a). Based on forensic analysis of the product, the estimated time of release was between 1995 and 2005. Therefore, the release is considered Pre-Existing Contamination and will be addressed by Evergreen under its sitewide Act 2 case (eFACTS PF No. 780190 [Philadelphia Refinery Sitewide]). Since none of BDH's Site Assessment or Site Characterization soil samples exhibited concentrations in soil above the MSCs in the vicinity of this tank, the release has been adequately characterized relative to the applicable MSCs. Additionally, in December 2023, Aquaterra collected one soil sample from 1.0-1.5 ft bgs from the center of the tank foundation. The sample was analyzed for Evergreen's short list of volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and lead. The sample did not exhibit concentrations in soil above the applicable MSCs (Aquaterra 2024a).

Per 25 Pa. Code § 245.310(a)(14), **Figure 6** shows the location of the Site Assessment soil borings which were installed as part of this effort. **Appendix E** provides copies of the boring logs.

The analysis selected for each soil sample was based on the AST contents as prescribed by PADEP's Short List of Petroleum Products inventory (Table III-5 of the *Land Recycling Program Technical Guidance Manual* [PADEP 2021a]). As shown in **Table 1**, for the 28[11] ASTs subject to this closure effort, analytes included one or a combination of the following short lists, based on historical tank contents:

- **Short List 1**. *Leaded Gasoline, Aviation Gasoline and Jet Fuel*: benzene, toluene, ethyl benzene, xylenes (total), cumene, naphthalene, 124TMB, 1,3,5-trimethylbenzene (135TMB), 1,2-dichloroethane (12DCA), 1,2-dibromoethane (12DBA), and lead.
- **Short List 2**. *Unleaded Gasoline*: benzene, toluene, ethyl benzene, xylenes (total), cumene, MTBE, naphthalene, 124TMB, and 135TMB.
- **Short List 3**. *Kerosene, Fuel Oil No. 1*: benzene, toluene, ethyl benzene, cumene, MTBE, naphthalene, 124TMB, and 135TMB.
- **Short List 4**. *Diesel Fuel and Fuel Oil No. 2*: benzene, toluene, ethyl benzene, cumene, MTBE, naphthalene, 1,2,4-TMB, and 135TMB.
- **Short List 5**. *Fuel Oil Nos. 4, 5, and 6, and Lubricating Oils and Fluids*: benzene, naphthalene, fluorene, anthracene, phenanthrene, pyrene, benzo(a)anthracene (BaA), chrysene, benzo(b)fluoranthene (BbF), benzo(a)pyrene (BaP), and benzo(g,h,i)perylene (BghiP).

[11] 14 ASTs in Tank Group 06, 12 ASTs in Tank Group 07, and 2 ASTs in Tank Group 07A.

- **Short List 6**. *Waste Oil:* benzene, toluene, ethyl benzene, cumene, naphthalene, pyrene, BaA, chrysene, BbF, BaP, indeno(1,2,3-c)pyrene (indeno), BghiP, and lead.

VOCs were analyzed via USEPA Method 8260D. Samples for SVOCs were analyzed via Method 8270E. Samples for lead were analyzed via USEPA Method 6010D. Additionally, TEG was analyzed for one tank via USEPA Method 8015D and pH was analyzed for one tank that stored fresh caustic via USEPA Method 9045D. Laboratory analytical services were provided by Alpha Analytical, Inc. (now Pace Analytical) of Westborough, Massachusetts and SGS North America, Inc. of Savannah, Georgia, both of which are PADEP-certified laboratories. Soil samples submitted for analyses were placed directly into laboratory-provided glassware and stored on ice in a cooler under appropriate chain of custody protocol.

Copies of the laboratory reports are included as **Appendix I**.

4.2 Site Characterization

When Site Assessment sampling indicated a potential release in Tank Group 06 and 07 (Section 4.1), a Site Characterization plan was developed. In total, the Site Characterization plan included the installation of 43 additional soil borings and the collection of 81 additional soil samples in Tank Group 06. The Site Characterization plan included the installation of 15 additional soil borings and the collection of 27 additional soil samples in Tank Group 07. It also included the installation of five groundwater monitoring wells in Tank Group 06 and the installation of eight groundwater monitoring wells in Tank Group 07, each sampled over two sampling events.[12] **Figure 7a** shows the locations of the additional soil borings installed during Site Characterization. **Figure 7b** shows the locations of the groundwater monitoring wells installed and sampled during Site Characterization. This section discusses how the Site Characterization plan was developed, the methods used during the sampling, and the evaluation of the results following characterization.

4.2.1 Site Characterization Soil Sampling

In accordance with 25 Pa. Code § 245.309(b)(4), the Site Characterization scope for soil in Tank Group 06, conducted between November 30, 2023 and July 18, 2024, included the installation of 43 soil borings and the collection of 81 soil samples. The Site Characterization scope for soil in Tank Group 07, conducted between July 18, 2022 and January 3, 2023, included the installation of 15 soil borings and the collection of 27 soil samples. The samples were collected at shallower (i.e., 0-0.5 ft bgs) and deeper (i.e., various 6-inch intervals from 3 to 9.5 ft bgs) soil depths than samples collected during the Site Assessment as necessary to vertically characterize the extent of COC concentrations in soil, as required by 25 Pa. Code § 245.309(c)(9). The sample collection protocols, and the sampling analyses used during the Site Characterization were consistent with those used during the Site Assessment. Samples were

[12] Due to the presence of LNAPL, monitoring well TG07-MW-06 was only sampled during the first groundwater sampling event for LNAPL. Additionally, an LNAPL sample was collected from TG07-MW-07 during the first groundwater event but was unusable due to low volume. BDH returned to the well a few days later to purge the minimal LNAPL and collected a groundwater sample at TG07-MW-07. During the second groundwater event, there was sufficient LNAPL present and a LNAPL sample was collected at TG07-MW-07.

either collected by Terraphase or Ransom. Additionally, sampling was completed by Terraphase in conjunction with monitoring well installation activities as discussed in Section 4.2.2.

Releases to soil from the ASTs and associated soil contamination would have been confined to the secondary containment berms. As a result, the horizontal extent of soil contamination associated with the ASTs would be limited to an extent no greater than the berms (except for where piping traverses through the berms). Where space existed between locations of identified soil contamination and the berms, horizontal step out sampling was considered to characterize soil contamination horizontally to within the containment areas.

The Site Characterization sampling methodology included visual inspection and field screening of soil during the installation of the soil borings. This allowed the field team to identify the interval with the greatest potential for contamination. If samples were collected at a depth greater than 0-0.5 ft bgs, it was either because PID readings were greater than those observed from 0-0.5 ft bgs, or PID readings indicated no evidence of VOCs, and samples were then collected from 3.0-3.5 ft bgs per PADEP (2021b). For these situations, shallow soil delineation sampling was unnecessary to determine the extent of concentrations greater than MSCs. Instead, the Site Characterization assumes that the concentrations observed in these subsurface samples also exist at the surface (i.e., 0-0.5 ft bgs).

Where vertical characterization was needed, Site Characterization samples were collected from the depth corresponding to the highest indication of contamination between the Site Assessment sample depth and the water table based upon field screening. Where horizontal delineation was needed, Site Characterization samples were collected from three depths: a surface depth (i.e., between 0-2 ft bgs), a depth corresponding to the highest indication of contamination between the 2 ft bgs and the water table based upon field screening, and immediately above the water table. Also, in order to determine the extent of COC concentrations in soil which are greater than MSCs, prior soil analytical results from Evergreen's remedial investigation (RI) activities were also used, as needed.

Soil boring logs are provided in **Appendix E**, in accordance with 25 Pa. Code § 245.309(c)(9) and 245.310(a)(14)**.**

4.2.2 Site Characterization Groundwater Sampling

In addition to soil characterization and in accordance with 25 Pa. Code § 245.309(b)(4), groundwater monitoring wells were installed in the vicinity of Tank Group 06 tanks GP R 270, GP R 276, GP R 284, GP R 285, and GP R 1038 and in the vicinity of Tank Group 07 tanks GP U 768, GP R 494, GP R 790, GP R 791, GP R 794, GP R 798, GP R 1116, and G PR 1117, as depicted on **Figure 7b**. The wells were installed to further characterize the extent of contamination identified in the vicinity of the tanks, as required by 25 Pa. Code §245.309(c)(10). Specifically, monitoring wells were installed in the vicinity of these tanks to target soil-to-groundwater exceedances in addition to the objectives described below.

The locations of the monitoring wells were selected with three objectives in mind: (1) to evaluate groundwater in the vicinity of each tank with suspected release to the environment, (2) to bias monitoring well locations toward areas where higher concentrations have been detected in soil, and (3) to obtain spatial coverage to better understand the nature and extent of COC concentrations in groundwater across the Tank Group 06 and 07. The data from these wells supplement the extensive

groundwater analytical data used by Evergreen to assess the fate and transport of Facility-related groundwater contamination in their 2025 Fate and Transport RIR (Stantec 2025a). The 2025 Fate and Transport RIR (Stantec 2025a) was approved by PADEP in April 2025 (PADEP 2025). PADEP considered Stantec's 2025 Fate and Transport RIR, and the data it relied upon, to be sufficient to assess potential future risks to human and ecological receptors and inform management decisions regarding sitewide cleanup goals.

In Tank Group 06, Ransom and MB Drilling, LLC installed the pre-pack wells through direct push technology to depths between 11 and 15 ft bgs. The monitoring wells were screened across the water table and constructed with 10 ft of 2-inch diameter Schedule 40 PVC well screens with 0.010-inch slotted pre-packed screen. A #1 sand filter pack was installed to fill the remaining annular space around the pre-packed screen to between 0.5 and 2 ft above the screened interval. A #00 fine sand seal was placed above the filter pack and the remaining annular space was filled with grout.

In Tank Group 07, Terraphase and TPI installed the pre-pack wells through direct push technology to depths between 12 and 13 ft bgs. The monitoring wells were constructed with 10 ft of 2-inch diameter Schedule 40 PVC well screens with 0.010-inch slotted pre-packed screen. A #1 sand filter pack was installed to fill the remaining annular space around the pre-packed screen to 2 ft above the screened interval. A #00 fine sand seal was placed above the filter pack and the remaining annular space was filled with hydrated bentonite chips. Monitoring well construction logs are provided in **Appendix E**.

The monitoring wells were installed and developed between November 29, 2023 and February 12, 2024 in Tank Group 06 and between December 21, 2022 and December 22, 2022 in Tank Group 07. The wells were developed with a submersible pump by over pumping to remove multiple well volumes. Well development continued until the water was visibly clear and free of sediment. Water produced by development of the Tank Group 06 wells was run through a portable granular activated carbon unit and discharged on the ground. Water produced by development of the Tank Group 07 wells was containerized and transferred for processing at the on-Site wastewater treatment plant.

Prior to groundwater sample collection, Ransom collected groundwater level measurements from newly-installed monitoring wells in Tank Group 06 (i.e., TG06-MW01 through TG06-MW05). Gauging was performed using an electronic oil/water interface probe. Approximate results of the gauging in Tank Group 06 are provided in **Tables 2a** through **2c**.[13] LNAPL was not encountered in these wells.

Similarly, prior to groundwater sample collection, Terraphase collected groundwater level and LNAPL thickness measurements from newly-installed monitoring wells in Tank Group 07 (i.e., TG07-MW01 through TG07-MW08). In addition, Terraphase utilized access to certain pre-existing monitoring wells located in the Tank Group for gauging purposes (i.e., B-45, B-148, and B-150, which are located to the north of GP R 494, south of GP R 796, and east of GP R 794, respectively). Gauging was performed using an electronic oil/water interface probe. The results of the gauging in Tank Group 07 are provided in **Tables 2d** and **2e.** To characterize unconfined groundwater conditions in proximity to Tank Group 06

[13] Since the five wells installed in Tank Group 06 were not surveyed, approximate groundwater elevations were calculated using the approximate ground surface elevation at each well based on the May 9, 2024 grading plan of the Facility provided by Pennoni.

and 07's ASTs, groundwater samples were collected from TG06-MW01 through TG06-MW05, TG07-MW01 through TG07-MW05, TG07-MW07, and TG07-MW08.[14] Measurable LNAPL was encountered in two wells BDH installed in Tank Group 07 (i.e., TG07-MW06 [i.e., max. 1.26 ft] and TG07-MW07 [i.e., max. 0.21ft]) and two Evergreen wells in Tank Group 07 (i.e., B-148 [i.e., max. 0.01 ft] and B-150 [i.e., max. 2.65 ft]) during both gauging events on January 3 and February 8, 2023.

The permanent monitoring wells installed by BDH were purged and sampled following established low flow protocols outlined in the PADEP Groundwater Monitoring Guidance (Appendix A of the *Land Recycling Program Technical Guidance Manual* [PADEP 2021a]).

- In Tank Group 06, an initial round of sampling for wells TG06-MW02, TG06-MW03, and TG06-MW05 was conducted on April 11, 2024. A second sampling event was conducted for these wells approximately 30 days later on May 14, 2024. For wells TG06-MW01 and TG06-MW04, the initial round of sampling was conducted on May 14, 2024. A second sampling event was conducted for these two wells approximately 30 days later on June 13, 2024.
- In Tank Group 07, an initial round of sampling was completed for all the wells (i.e., TG07-MW01 through TG07-MW08) on January 4 through 6, 2023. A second sampling event was conducted approximately 30 days later on February 8 through 9, 2023. Due to the presence of LNAPL, groundwater samples were not collected from well TG07-MW06 during either of the sampling events and a groundwater sample was not collected from well TG07-MW07 during the second sampling event.

The wells were purged using either a peristaltic pump or submersible pump in Tank Group 06 and 07, respectively. Purging continued until groundwater indicator parameters (i.e., water temperature, pH, conductivity, turbidity, and oxygen reduction potential) stabilized, as measured using a properly calibrated Horiba U-52 water quality meter equipped with a flow-through cell (see **Appendix E**). Tank Group 06 groundwater samples were analyzed for benzene, 135TMB, BaP, naphthalene, and/or lead based on the specific list of constituents in soil in the area of the monitoring well that exhibited concentrations greater than the SGW MSCs.[15] The Tank Group 07 groundwater samples were analyzed for PADEP Short List 1-6 parameters.

In Tank Group 07, LNAPL characterization samples were collected from wells where measurable LNAPL was encountered (i.e., TG07-MW06 and TG07-MW07) using a dedicated disposable Teflon bailer. The LNAPL characterization samples were analyzed for PIANO VOC (8260D, VOC by GC/MS), polycyclic aromatic hydrocarbons (PAH)/biomarkers (8270E-SIM), organic lead (8270E-SIM), density (SM2520C), and saturated hydrocarbons (8015D by GC-FID). A copy of the laboratory report is included in **Appendix I** and discussed further in Section 4.3.2.

[14] Groundwater samples were not collected from monitoring well TG07-MW-06 and only one round of groundwater sampling was completed at monitoring well TG07-MW-07 due to the presence of LNAPL. Instead, LNAPL characterization samples were collected and analyzed as discussed.

[15] As presented in Table 3, additional constituents (i.e., ethyl benzene and 124TMB) were also identified in soil above the applicable MSCs. These were not analyzed in the groundwater samples as they were identified following the groundwater sample scoping during the Site Characterization soil sampling.

Following sample collection, the bottles were packaged in coolers with bagged ice. A custody record for each sample was documented using a chain of custody form, which accompanied the sample containers during sample collection at the Site, transport to the lab, and analysis.

For these wells where groundwater samples were not collected due to the presence of LNAPL, it is assumed that concentrations in groundwater exceed the MSCs.

4.3 Analytical Results

Soil analytical results were compared to the following Non-Res SHS MSC numeric values to identify potential releases to the environment and determine if releases of regulated substances from the ASTs, and their associated piping, could have resulted in this contamination (per 25 Pa. Code § 245.309(a)(4)):

- Non-Res MSCs for DC Exposure to Surface Soil (0-2 ft)[16]
- Non-Res MSCs for DC Exposure to Subsurface Soil (2-15 ft)
- Non-Res MSCs for SGW for Used Aquifers (TDS ≤ 2,500)

Where the soil data suggest potential releases of regulated substances from the ASTs, soil and groundwater concentrations were compared to the following Non-Res SHS MSC numeric values to determine the extent of migration of regulated substances in soil and groundwater (per 25 PA Code § 245.309(b)(4)):

<u>Soil</u>

- Non-Res MSCs for DC Exposure to Surface Soil (0-2 ft)
- Non-Res MSCs for DC Exposure to Subsurface Soil (2-15 ft)
- Non-Res MSCs for SGW for Used Aquifers (TDS ≤ 2,500)

<u>Groundwater</u>

- Non-Res MSCs for GW Exposure for UA (TDS ≤ 2,500)

As discussed further in Section 6.1, soil and groundwater analytical results were not compared to PADEP's Vapor Intrusion Screening Levels (VISL) as part of this evaluation since there is currently no vapor intrusion exposure in the area (i.e., vapor intrusion pathway is incomplete). Future buildings at the Facility will be subject to vapor intrusion investigation and evaluation to determine if conditions could pose a potential unacceptable risk to future occupants. Similarly, as discussed further in Section 6.1, the comparison to Non-Res numeric values is appropriate since the future land use in the area of Tank Group 06 and 07 is commercial/industrial.

[16] As described in Section 4.2.1, soil sampling intervals were based on the results of field screening (i.e., staining, odors, and elevated PID readings). Where potentially impacted materials were not encountered, discrete samples were collected from native soil at a depth of 3.0-3.5 ft bgs, in accordance with PADEP's (2021b) *Closure Requirements for Aboveground Storage Tank Systems*. Since only subsurface (>2 ft bgs) soil samples were collected from some locations during the Site Assessment, the comparison of the resulting concentrations to MSCs conservatively disregard the surface/subsurface soil designation reflected in the Non-Res Soil DC MSCs (i.e., results were compared to the Non-Res DC MSCs for surface soil).

Based on Site Assessment analytical results from Tank Group 06 ASTs, PADEP was notified via telephone on January 4, 2023, pursuant with 25 Pa. Code § 245.304(c)(1) and 25 Pa. Code § 245.305, that concentrations greater than the applicable MSCs were identified at ASTs GP R 270, GP R 276, GP R 282, GP R 284, and GP R 285. PADEP assigned incident No. 58434 to this initial notification for tanks in Tank Group 06. Pursuant to discussions with our PADEP case team, this and any subsequent notifications required in Tank Group 06 were combined with Incident No. 58434. Three additional notifications of release were reported to PADEP on July 12, 2023 (GP R 281), July 18, 2023 (GP R 273 and GP R 1038), and January 25, 2024 (GP R 1101). Copies of notification documents are included in **Appendix J**.

Based on Site Assessment analytical results from Tank Group 07 ASTs, PADEP was notified via telephone on August 10, 2022, pursuant with 25 Pa. Code § 245.304(c)(1) and 25 Pa. Code § 245.305, that concentrations greater than the applicable MSCs were identified at ASTs GP R 798, GP R 799, GP R 1088, GP R 1116, and GP R 1117. PADEP assigned incident No. 57973 to this initial notification for tanks in Tank Group 07. Similarly, this and any subsequent notifications required in Tank Group 07 were combined with the Incident No. 57973. One additional notification of release was reported to PADEP on August 25, 2022 (GP R 494, GP R 790, GP R 791, GP R 792, GP R 793, GP R 794, and GP U 767). Copies of notification documents are included in **Appendix J**.

The following sections provide a more detailed discussion of the results of sampling conducted in proximity to each of the 20 ASTs where the Site Assessment soil analytical results indicated potential releases to the environment.

4.3.1 Defining the Extent of Contamination

Based on the Site Assessment analytical results, Site Characterization analytical results, and Evergreen's pre-existing data set, the extent of concentrations exceeding MSCs in soil and groundwater in the areas of Tank Group 06 and 07 have been defined. Groundwater impacts are shown to extend laterally beyond the Tank Group boundaries. The Site Assessment and Site Characterization soil and groundwater results are tabulated and summarized in **Appendix H**.

4.3.1.1 Soil

As shown in **Table 3**, the following constituents were detected in soil samples from Tank Group 06 and 07 at concentrations greater than applicable MSCs:

- Non-Res MSCs for DC Exposure to Surface Soil: naphthalene (Tank Group 06) and benzene (Tank Group 07)
- Non-Res MSCs for DC Exposure to Subsurface Soil: none (Tank Group 06); benzene and cumene (Tank Group 07)
- Non-Res MSCs for SGW for Used Aquifers (TDS ≤ 2,500) MSC: benzene, ethyl benzene, 124TMB, 135TMB, BaP, naphthalene, and lead (Tank Group 06); benzene, cumene, ethyl benzene, toluene, 124TMB, 135TMB, BaP, naphthalene, and lead (Tank Group 07)

Figures 8a and **8b** present the horizontal extent of COCs in surface and subsurface soil, respectively, at concentrations greater than applicable Non-Res SHS MSCs.

4.3.1.2 Groundwater

As shown in **Table 4**, in accordance with 25 Pa. Code § 245.309(c)(10)(iv), benzene and lead were detected in groundwater samples collected from monitoring wells located in Tank Group 06 at concentrations greater than the Non-Res MSCs for Groundwater Exposure (Used Aquifer). Benzene, cumene, 12DCA, toluene, naphthalene, and lead were detected in groundwater samples collected from monitoring wells located in Tank Group 07 at concentrations greater than the Non-Res MSCs for Groundwater Exposure (Used Aquifer). **Figures 9a** and **9b** present the horizontal extent of COCs in groundwater in the area of Tank Group 06 and 07[17] and more broadly across the Facility, respectively, at concentrations greater than the applicable Non-Res SHS MSCs.

4.3.1.3 LNAPL

As depicted on **Figure 5,** the horizontal extent of LNAPL has been delineated in the vicinity of Tank Group 06 and 07 based on data collected during the Site Characterization gauging events, or the most recent Evergreen gauging data collected from previously existing wells.[18] As shown on **Figure 5**, 18 distinct LNAPL plumes have been identified in, or in proximity to Tank Group 06 and 07. The current aerial extent of each LNAPL plume has been defined.

4.3.2 Allocating Contamination

Several lines of evidence have been used to determine if the contamination identified within Tank Group 06 and 07, as noted in Sections 4.3.1.1 (Soil), 4.3.1.2 (Groundwater), and 4.3.1.3 (LNAPL), is indicative of (1) Pre-Existing Contamination, (2) Post-September 2012 contamination that is likely from ASTs releases, or (3) Post-September 2012 Contamination related to release(s) from sources other than ASTs. This evaluation included consideration for (1) whether the constituents exceeding MSCs are consistent with the product(s) stored in the tank, (2) whether the spatial distribution suggests the source of the contamination is near an ASTs, (3) whether the magnitude of the exceedances is consistent with levels observed from other sources in Evergreen's AOIs, (4) whether the spatial distribution is consistent with other sources in the area or if there are outliers, (5) whether the data are consistent with previously characterized contamination known to have existed in the area due to releases prior to September 8, 2012, (6) where there are indicator chemicals present in soil, groundwater, or LNAPL (e.g., gasoline additives) which were not used or stored after September 8, 2012, and/or (7) whether LNAPL analytical results and forensic evaluations suggest that contamination resulted from release(s) prior to September 8, 2012.

In order to explore these lines of evidence, all the soil, groundwater, and LNAPL sampling and analytical data available within the Tank Group 06 and 07 areas were considered. This includes data generated by Evergreen during their previous investigations (i.e., RIR), by BDH during sampling performed for AST

[17] The maximum concentration from the two most recent groundwater sampling events at each location with sample dates ranging from September 8, 2012 to May 31, 2024 were considered when defining the extent of groundwater contamination.

[18] The current estimated extent of LNAPL is based upon the most recent gauging event at each location, which ranged from October 8, 2019 to October 28, 2024.

Closure purposes, as well as for the investigation of release(s) in the area unrelated to ASTs. For illustration of these data sets, the following supplemental figures were developed:

- **Figures 10a** through **10i** and **11a** through **11e** present the available soil analytical results from samples collected in proximity to each AST and compare these concentrations to applicable SHS MSCs in Tank Group 06 and 07, respectively. Databoxes summaries are provided for each soil boring to allow for a detailed review of the soil characterization results in and around each AST. These figures support the identification of COC concentrations indicative of Pre-Existing Contamination (e.g., MTBE, 12DBA, 12DCA, lead) and whether they are spatially correlated with other COCs which would not be exclusive to older release(s) to the environment.
- **Figures 12a** through **12i** present a generalized illustration of the spatial distribution of the 10 constituents greater than the applicable MSCs in soil samples collected from the Tank Group 06 and 07 area by BDH and Evergreen: benzene, cumene, ethyl benzene, 124TMB, 135TMB, toluene, BaP, naphthalene, and lead.
- **Figure 13** presents the groundwater analytical results for those wells specifically installed and/or sampled by BDH during Site Characterization. Databox summaries are provided for each well and allow for a review of the groundwater characterization results from each sampling event. The concentrations are compared to applicable MSCs. Finally, the figure also illustrates the current estimated extent of LNAPL.

12DBA and 12DCA were historically used as a scavenger for lead in anti-knock gasoline mixtures[19] and up until the ban of leaded gasoline in the 1990s could have been present in gasoline-related releases to the environment. Similarly, MTBE was phased out of use in 2006. Lead in soil, groundwater, and some LNAPL components at the Site is related to either historic fill or releases of gasoline containing tetraethyl lead. Tetraethyl lead was phased out of use in 1996 and historic fill would have been placed prior to September 2012. Accordingly, the presence of 12DBA, 12DCA, MTBE, and lead in soil and groundwater (including some LNAPL components) is representative of Pre-Existing Contamination.

4.3.2.1 GP R 270

GP R 270 was formerly used to hold recovered oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10a**. As shown, some of the soil analytical results in the GP R 270 area were collected by Evergreen. The Site Assessment and Site Characterization data provides a more detailed understanding of the distribution of constituent concentrations in soil.

At GP R 270, two constituents (i.e., benzene and lead) were detected at concentrations in soil above the applicable MSCs in four out of 13 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, recovered oil is a secondary material consisting primarily of oil products recovered from refining production (i.e., oil separator skimmings, slop oil and emulsions, oil skimmed from ballast water tanks, and oil from refinery process units). These secondary materials are often byproducts of the oil-water separating process or found in tank bottoms, where lead

[19] https://www.atsdr.cdc.gov/toxprofiles/tp37.pdf; https://www.atsdr.cdc.gov/toxprofiles/tp38.pdff

is neither found, used, or added. Therefore, the presence of lead in soil is not the result of a release from GP R 270.

As shown on **Figure 10a**, benzene was detected in soil at concentrations greater than the applicable MSCs at GPR270-14 and GPR270-19. As discussed in Section 2.6, a Pre-September 2012 release is known to have occurred at this tank, and this area is impacted with Pre-Existing Contamination. As shown on **Figure 12a**, the concentrations of benzene detected during Site Assessment and Site Characterization sampling near GP R 270 are generally consistent with the range of benzene concentrations characterized across AOI 6 and AOI 7 by Evergreen. Given the presence of a pre-September 2012 release near this tank, the range of benzene concentrations in soil, and the presence of benzene in soil throughout the Facility, the presence of benzene in soil is Pre-Existing Contamination.

As shown on **Figure 13**, one constituent (i.e., lead) was detected at concentrations above the applicable MSCs in groundwater at TG06-MW01. As discussed, in Section 4.3.2, the presence of lead in groundwater is Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.2 GP R 273

GP R 273 was formerly used to hold vacuum gas oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10b**. As shown, there were limited soil analytical results in the GP R 273 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 273, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in one out of 12 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, vacuum gas oil is an intermediate produced during the vacuum distillation of crude oil. Vacuum gas oil is used as a feedstock for refining processes (i.e., Fluid Catalytic Cracking [FCC], hydrocracking, coking, etc.). Vacuum gas oil is mainly composed of hydrocarbons and would not contain lead or lead-containing additives. The presence of lead in soil is not the result of a release from GP R 273.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.3 GP R 276

GP R 276 was formerly used to hold light naphtha. Analytical results for soil samples collected near this AST are depicted on **Figure 10c**. As shown, there were limited soil analytical results in the GP R 276 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 276, four constituents (i.e., benzene, 135TMB, BaP and lead) were detected at concentrations in soil above the applicable MSCs in seven out of 15 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, light naphtha is produced during the distillation of crude oil and can be blended into finished gasoline products. Light naphtha is

composed of a hydrocarbon mixture and would not contain lead or lead-containing additives. Therefore, the presence of lead in soil is not the result of a release from GP R 276.

As shown on **Figure 10c**, benzene was detected above the applicable MSCs at multiple locations to the north and east of GP R 276, and adjacent to former piping to the west and south of this AST. 135TMB was detected at one location, GPR276-20, north of and adjacent to GP R 276. BaP was detected at one location, GPR276-16, beneath former piping south of GP R 276. At both locations, the 135TMB and BaP exceedances were identified in a sample collected in the subsurface (i.e., 3-3.5 and 4.5-5 ft bgs, respectively), while at least one shallower soil sample in the same boring did not identify concentrations of these constituents greater than the applicable MSCs. Since the 135TMB and BaP exceedance were identified at depth and shallower concentrations are below applicable MSCs, these deeper elevated concentrations of 135TMB and BaP cannot be the result of a surficial release from GP R 276.

Additionally, as shown on **Figures 12a, 12f,** and **12g**, the concentrations of benzene, 135TMB, and BaP detected during Site Assessment and Site Characterization sampling near GP R 276 are generally consistent with the constituent concentrations characterized across AOI 6 and AOI 7 by Evergreen, suggesting they are present in soil at these levels ubiquitously across the Facility rather than as a result of a release from the tank. Therefore, based on the range of concentrations in soil, their presence throughout the Facility, the depth of the sample with the 135TMB and BaP exceedances, and lack of evidence of a Post-2012 release(s) associated with GP R 276, the presence of these constituents in soil is concluded to be Pre-Existing Contamination.

As shown on **Figure 13**, one constituent (i.e., lead) was detected at concentrations above the applicable MSCs in groundwater at TG06-MW02. As discussed, in Section 4.3.2, the presence of lead in groundwater is Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.4 GP R 281

GP R 281 was formerly used to hold vacuum gas oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10d**. As shown, there were limited soil analytical results in the GP R 281 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 281, no constituents were detected at concentrations in soil above the applicable MSCs in any of the eight borings advanced by BDH. However, as discussed in Sections 3 and 4.1, free product and water were encountered beneath the concrete pad at this tank. Based upon these observations, PADEP was notified on January 12, 2023 of a potential release from this AST to the environment. Interim measures included recovering the observed free product and ponded water from beneath the tank foundation. Additionally, BDH collected a sample of the free product in January 2023 (see **Appendix H**). CQ of Santa Barbara, California was retained by BDH to conduct a forensic evaluation of the LNAPL analytical results. CQ's evaluation indicated that the LNAPL in the January 2023 sample was due to a release(s) that occurred approximately 18 to 28 years ago (~1995 – 2005).

As discussed in Section 2.6, Pre-September 2012 releases are known to have occurred at this tank, and this area is impacted with Pre-Existing Contamination. Based on the forensics dating of the January 2023 LNAPL sample (i.e., Pre-2012) and the two prior releases known to have occurred at this tank, the LNAPL contamination encountered by BDH in proximity to this AST is Pre-Existing Contamination.

4.3.2.5 GP R 282

GP R 282 was formerly used to hold vacuum gas oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10e**. As shown, there were limited soil analytical results in the GP R 281 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 282, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in two out of eight borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, as the AST contained vacuum gas oil like GP R 273, the presence of lead in soil is not the result of a release from GP R 282.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.6 GP R 284

GP R 284 was formerly used to hold vacuum gas oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10f**. As shown, there were limited soil analytical results in the GP R 284 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 284, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in one out of 15 borings advanced by BDH As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, as the AST contained vacuum gas oil like GP R 273 and GP R 282, the presence of lead in soil is not the result of a release from GP R 284.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.7 GP R 285

GP R 285 was formerly used to hold light naphtha. Analytical results for soil samples collected near this AST are depicted on **Figure 10g.** As shown, there were limited soil analytical results in the GP R 285 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 285, five constituents (i.e., benzene, ethyl benzene, 124TMB, 135TMB, and naphthalene) were detected at concentrations in soil above the applicable MSCs in three out of 12 borings advanced by BDH. As shown on **Figure 10g**, benzene was detected at concentrations greater than the applicable MSCs at three locations (i.e., GPR285-01, GPR285-07, and GPR285-13), which are located outside the tank boundary or along former associated piping. The exceedances of benzene were identified in samples collected in the subsurface (i.e., 2-2.5, 4-4.5, and 4.5-5 ft bgs). Shallower soil sample at GPR285-07 did not identify benzene at concentrations greater than the applicable MSCs. Ethyl benzene,

124TMB, 135TMB, and naphthalene were only detected above the applicable MSCs at one location (i.e., GPR285-07), which is located along associated former piping. The exceedances of these constituents were identified in a sample collected in the subsurface (i.e., 2-2.5 ft bgs), while shallower soil samples in the same boring did not identify these constituents at concentrations greater than the applicable MSCs. Since benzene, ethyl benzene, 124TMB, 135TMB, and naphthalene were identified at depth and shallower concentrations of these constituents are below the applicable MSCs, these deeper elevated concentrations cannot be the result of a surficial release from GP R 285.

Additionally, as shown in **Figures 12a, 12c, 12e, 12f** and **12h**, the concentrations of these constituents detected during Site Assessment and Site Characterization sampling near GP R 285 are also generally low and consistent with their range of concentrations characterized across AOI 6 and AOI 7 by Evergreen, suggesting they are present in soil at these levels ubiquitously across the Facility rather than as the result of a release from the tank. Therefore, based on the range of concentrations in soil, their presence throughout the Facility, the depth of the exceedances, and lack of evidence of a Post-2012 release(s) associated with GP R 285, the presence of these constituents in soil is assumed to be Pre-Existing Contamination.

As shown on **Figure 13**, one constituent (i.e., benzene) was detected at concentrations above the applicable MSCs in groundwater at TG06-MW04 during the initial sampling event in May 2024. Although elevated concentrations of benzene, ethyl benzene, 124TMB, and 135TMB were identified in shallower soil samples in the co-located boring GPR285-07, the deepest sampled interval, 9.5-10.0 ft bgs, did not contain concentrations of benzene or other constituents above the applicable MSCs. The soil analytical results indicate benzene, or any other constituent that exceeded the applicable MSCs at this boring, in soil has not reached the water table at concentrations greater than the SGW MSCs, and therefore, the groundwater contamination identified in TG06-MW04 is not related to the tank. Since there is no specific evidence of a Post-September 2012 release near this tank and because benzene is known to be present in groundwater in this area through Evergreen's Act 2 work, the presence of benzene in groundwater is concluded to be Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.8 GP R 1038

GP R 1038 was formerly used to hold alky slurry. Analytical results for soil samples collected near this AST are depicted on **Figure 10h**. As shown, there were no soil analytical results in the GP R 1038 area collected by Evergreen. The Site Assessment and Site Characterization data provides new information about the nature and extent of contamination in soil in this area.

At GP R 1038, two constituents (i.e., naphthalene and lead) were detected at concentrations in soil above the applicable MSCs in six out of 12 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, alky slurry is a byproduct of alkylation, which is a chemical reaction used to produce high-octane gasoline components (i.e., alkylates). The alkylation process combines hydrocarbons and isobutane together, which would not contain lead or lead-containing additives. Therefore, the presence of lead in soil is not the result of a release from GP R 1038.

As shown on **Figure 10h**, naphthalene was only detected above the applicable MSCs at one location (i.e., GPR1038-04) along the western edge of the tank in surface soil. As shown on **Figure 12h**, the concentrations of naphthalene detected during Site Assessment and Site Characterization sampling near GP R 1038 are also generally consistent with concentrations characterized across AOI 6 and AOI 7 by Evergreen, suggesting it is present in soil at these levels ubiquitously across the Facility rather than as a result of a release from the tank. Given the low exceedance rate, range of concentrations, presence throughout the Facility, and lack of evidence of a Post-2012 release(s) associated with GP R 1038, the presence of naphthalene in soil near GP R 1038 is Pre-Existing Contamination.

As shown on **Figure 13**, one constituent (i.e., lead) was detected at concentrations above the applicable MSCs in groundwater at TG06-MW05. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.9 GP R 1101

GP R 1101 was formerly used to hold recovered oil. Analytical results for soil samples collected near this AST are depicted on **Figure 10i**. As shown, there were no soil analytical results in the GP R 1101 area collected by Evergreen. The Site Assessment and Site Characterization data provides new information about the nature and extent of contamination in soil in this area.

At GP R 1101, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in one out of 10 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, as the AST contained recovered oil like GP R 270, the presence of lead in soil is not the result of a release from GP R 1101.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.10 GP R 494

GP R 494 was formerly used to hold main frac bottoms. Analytical results for soil samples collected near this AST are depicted on **Figure 11a**. As shown, there were no soil analytical results in the GP R 494 area collected by Evergreen. The Site Assessment and Site Characterization data provides new information about the nature and extent of contamination in soil in this area.

At GP R 494, two constituents (i.e., BaP and lead) were detected at concentrations in soil above the applicable MSCs in two out of nine borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, main frac bottoms represent the heaviest product stream from the bottom of the main fractionation column of the catalytic cracking of heavy gas oils. This product consists of highly viscous hydrocarbons and would not contain lead or lead-containing additives. Therefore, the presence of lead in soil is not the result of a release from GP R 494.

As shown on **Figure 11a**, BaP was only detected above the applicable MSCs at one location (i.e., GPR494-08) along the associated former piping in a sample collected in the subsurface (i.e., 3-3.5 ft bgs), while a shallower soil sample in the same boring did not identify BaP concentrations greater than the applicable

MSCs. Since the BaP exceedance was identified at depth (i.e., 3 ft bgs) and shallower BaP concentrations are below the applicable MSCs, this deeper elevated concentration of BaP cannot be the result of a surficial release from GP R 494.

Additionally, as shown in **Figure 12g**, the concentration of BaP detected during Site Assessment and Site Characterization sampling near GP R 494 are also generally consistent with their range of concentrations characterized across AOI 6 and AOI 7 by Evergreen, suggesting it is present in soil at these levels ubiquitously across the Facility rather than as a result of a release from the tank. Therefore, based on its low exceedance rate, the range and spatial distribution of BaP concentrations, its presence throughout the Facility, the depth of the sample with the BaP exceedance, and lack of evidence of a Post-2012 release(s) associated with GP R 494, the presence of BaP in soil near GP R 494 is Pre-Existing Contamination.

As shown on **Figure 13**, no constituents were detected at concentrations above the applicable MSCs in groundwater at TG07-MW-01.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.11 GP R 790

GP R 790 was formerly used to hold benzene. Analytical results for soil samples collected near this AST are depicted on **Figure 11b**. As shown, there were limited soil analytical results in the GP R 790 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

As shown on **Figure 11b**, two constituents (i.e., benzene and toluene[20]) were detected at concentrations in soil above the applicable MSCs in six out of eight borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of benzene and toluene in soil at this tank is considered Pre-Existing Contamination.

As shown on **Figure 13**, three constituents (i.e., benzene, cumene, and 12DCA) were detected at concentrations above the applicable MSCs in groundwater at TG07-MW-05. Given the presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of these constituents in groundwater is concluded to be Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

[20] Since the primary contents of GP R 790 is benzene, benzene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene).

4.3.2.12 GP R 791

GP R 791 was formerly used to hold benzene. Analytical results for soil samples collected near this AST are depicted on **Figure 11b**. As shown, there were no soil analytical results in the GP R 791 area collected by Evergreen. The Site Assessment and Site Characterization data provides new information about the nature and extent of contamination in soil in this area.

As shown on **Figure 11b**, two constituents (i.e., benzene and cumene[21]) were detected at concentrations in soil above the applicable MSCs in eight out of nine borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of benzene and cumene in soil at this tank is considered Pre-Existing Contamination.

BDH did not collect a groundwater sample at this AST as LNAPL was identified at its associated monitoring well (i.e., TG07-MW-06). Given the presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of LNAPL near this tank is concluded to be Pre-Existing Contamination. Copies of Evergreen gauging information, BDH and Evergreen LNAPL results, and BDH LNAPL forensic analysis are included as **Appendix F**, **Appendix H,** and **Appendix I**, respectively.

Due to the presence of LNAPL in the monitoring well which has been determined to be Pre-Existing Contamination, dissolved phase groundwater contamination in the area surrounding the AST is also considered Pre-Existing Contamination.

The soil, groundwater, and LNAPL contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.13 GP R 792

GP R 792 was formerly used to hold cumene. Analytical results for soil samples collected near this AST are depicted on **Figure 11b**. As shown, there were limited soil analytical results in the GP R 792 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

As shown on **Figure 11b**, one constituent (i.e., cumene[22]) was detected at concentrations in soil above the applicable MSCs in five out of seven borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is

[21] Since the primary contents of GP R 791 is benzene, benzene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene).

[22] Since the primary contents of GP R 792 is cumene, cumene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene). Cumene was still the only constituent identified above the applicable MSCs.

part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of cumene in soil at this tank is considered Pre-Existing Contamination.

BDH did not install a monitoring well at this AST because wells installed by Evergreen and BDH were already present in the vicinity. The sampling performed by Evergreen provides information about the nature and extent of contamination in groundwater in this area. Six constituents (i.e., benzene, cumene, toluene, BaP, BghiP, naphthalene, and lead) were detected at concentrations above the applicable MSCs in groundwater at B-150 and B-177,[23] which are wells located immediately downgradient of GP R 792. Given the presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of these constituents in groundwater is concluded to be Pre-Existing Contamination.

LNAPL has not been identified at B-177 but has been encountered multiple times at B-150. The observation of LNAPL at this well is consistent with the estimated extent of Pre-Existing LNAPL shown on **Figure 5**. Given the presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of LNAPL near this tank is concluded to be Pre-Existing Contamination.

The soil, groundwater, and LNAPL contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.14 GP R 793

GP R 793 was formerly used to hold cumene. Analytical results for soil samples collected near this AST are depicted on **Figure 11b**. As shown, there were limited soil analytical results in the GP R 793 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

As shown on **Figure 11b**, one constituent (i.e., cumene[24]) was detected at concentrations in soil above the applicable MSCs in four out of six borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of cumene in soil at this tank is considered Pre-Existing Contamination.

BDH did not install a monitoring well at this AST because wells installed by Evergreen and BDH were already present in the vicinity. The sampling performed by BDH provides information about the nature and extent of contamination in groundwater in this area. Specifically, four constituents (i.e., benzene, cumene, toluene, and naphthalene) were detected at concentrations above the applicable MSCs in groundwater at TG07-MW-07, which is a well located immediately downgradient of GP R 793. Given the

[23] Considering only parameters within PADEP's Short List 1-6 and concentrations from the two most recent groundwater sampling events post-September 8, 2012.

[24] Since the primary contents of GP R 793 is cumene, cumene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene). Cumene was still the only constituent identified above the applicable MSCs.

presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of these constituents in groundwater is concluded to be Pre-Existing Contamination.

LNAPL was also identified in TG07-MW-07 during the second gauging event completed by BDH in February 2023. The LNAPL sample collected from this well was characterized as likely being linked to the product, or potential waste, of the reformate formulation process and naphtha-like to light distillate range. Tetraethyl lead was also detected in the LNAPL sample. Given the presence of Pre-Existing Contamination at the 700 Series Tanks, the presence of LNAPL near this tank is consistent with Pre-Existing Contamination in the area. LNAPL results and LNAPL forensic analysis are provided in **Appendix H** and **Appendix I**, respectively.

The soil, groundwater, and LNAPL contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.15 GP R 794

GP R 794 was formerly used to hold TEG. Analytical results for soil samples collected near this AST are depicted on **Figure 11b**. As shown, there were limited soil analytical results in the GP R 794 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

As shown on **Figure 11b**, seven constituents (i.e., benzene, cumene, ethyl benzene, toluene, 124TMB, 135TMB, and naphthalene) were detected at concentrations in soil above the applicable MSCs in eight out of nine borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of these constituents in soil at this tank is considered Pre-Existing Contamination.

TG07-MW-07 is the closest monitoring well to GP R 794. Groundwater data for TG07-MW-07 are discussed above; this well is also the closest monitoring well to GP R 793. As discussed above, the groundwater contamination and LNAPL encountered at this well is consistent with Pre-Existing Contamination in the area.

The soil, groundwater, and LNAPL contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.16 GP R 798

GP R 798 was formerly used to hold benzene. Analytical results for soil samples collected near this AST are depicted on **Figure 11c**. As shown, there were limited soil analytical results in the GP R 798 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

As shown on **Figure 11c**, one constituent (i.e., benzene[25]) was detected at concentrations in soil above the applicable MSCs in six out of seven borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of these constituents in soil at this tank is considered Pre-Existing Contamination.

As shown on **Figure 13**, one constituent (i.e., benzene) was detected at concentrations above the applicable MSCs in groundwater at TG07-MW-04. Given the presence of Pre-Existing Contamination at the 700 Series Tanks and the lack of evidence of a Post-2012 release in this area, the presence of this constituent in groundwater is concluded to be Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.17 GP R 799

GP R 799 was formerly used to hold benzene. Analytical results for soil samples collected near this AST are depicted on **Figure 11c**. As shown, there were no soil analytical results in the GP R 799 area collected by Evergreen. The Site Assessment and Site Characterization data provides new information about the nature and extent of contamination in soil in this area.

As shown on **Figure 11c**, one constituent (i.e., benzene[26]) was detected at concentrations in soil above the applicable MSCs in all eight borings advanced by BDH, which are located within or adjacent to the former tank boundary and along associated former piping. As discussed in Section 2.6, this tank is part of the 700 Series Tanks where Pre-Existing Contamination is known to be located, and, accordingly, the presence of these constituents in soil at this tank is considered Pre-Existing Contamination.

TG07-MW-04, TG07-MW-05, and TG07-MW-06 are the closest monitoring wells to GP R 799. Groundwater data for TG07-MW-04, TG07-MW-05, and TG07-MW-06 are discussed above; these wells are also the closest monitoring wells to other 700 Series Tanks. As discussed above, the groundwater contamination and LNAPL encountered at these wells are Pre-Existing Contamination.

The soil, groundwater, and LNAPL contamination identified in proximity to this AST is Pre-Existing Contamination.

[25] Since the primary contents of GP R 798 is benzene, benzene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene). Benzene was still the only constituent identified above the applicable MSCs.

[26] Since the primary contents of GP R 799 is benzene, benzene was the only constituent analyzed during Site Assessment sampling at this tank. However, during Site Characterization sampling, a select list of VOCs and SVOCs in PADEP's Short List 1-6 were analyzed (i.e., benzene, cumene, ethyl benzene, MTBE, 135TMB, 135TMB, toluene, xylenes, BaP, and naphthalene). Benzene was still the only constituent identified above the applicable MSCs.

4.3.2.18 GP R 1116

GP R 1116 was formerly used to hold UDEX feed. Analytical results for soil samples collected near this AST are depicted on **Figure 11d**. As shown, there were limited soil analytical results in the GP R 1116 area collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP R 1116, two constituents (i.e., benzene and lead) were detected at concentrations in soil above the applicable MSCs in two out of 16 borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, UDEX feed is a hydrocarbon mixture that is fed into the UDEX process. The UDEX process extracts aromatics from hydrocarbon streams utilizing the interaction between the UDEX feed and a solvent (i.e., polyethylene glycol). UDEX feed is composed of hydrocarbons and does not contain lead or lead-containing additives. Therefore, the presence of lead in soil is not the result of a release from GP R 1116.

As shown in **Figure 11d**, benzene was only detected above the applicable MSCs at one location (i.e., GPR1116-08) adjacent to the former tank boundary. As shown on **Figure 12a**, the concentrations of benzene detected during Site Assessment and Site Characterization sampling near GP R 1116 are also generally consistent with benzene concentrations characterized across AOI 6 and AOI7 by Evergreen, suggesting it is present in soil at these levels ubiquitously across the Facility rather than as a result of a release from the tank. Given the low exceedance rate, range of concentrations, its presence throughout the Facility, and lack of evidence of a Post-2012 release(s) associated with GP R 1116, the presence of benzene in soil near GP R 1116 is Pre-Existing Contamination.

As shown on **Figure 13**, no constituents were detected at concentrations above the applicable MSCs in groundwater at TG07-MW-03. LNAPL was not identified in TG07-MW-03.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.19 GP R 1117

GP R 1117 was formerly used to hold UDEX feed. Analytical results for soil samples collected near this AST are depicted on **Figure 11d**. As shown, there were no soil analytical results in the GP R 1117 area collected by Evergreen. The Site Assessment and Site Characterization provides new information about the nature and extent of contamination in soil in this area.

At GP R 1117, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in three out of eight borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, as the AST contained UDEX feed like GP R 1116, the presence of lead in soil is not the result of a release from GP R 1117.

The soil contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.2.20 GP U 767

GP U 767 was formerly used to hold recovered oil. Analytical results for soil samples collected near this AST are depicted on **Figure 11e**. As shown, there were limited soil analytical results in the GP U 767 area

collected by Evergreen. The Site Assessment and Site Characterization data provides more detailed information about the distribution of constituent concentrations in soil.

At GP U 767, one constituent (i.e., lead) was detected at concentrations in soil above the applicable MSCs in one out of seven borings advanced by BDH. As discussed, in Section 4.3.2, the presence of lead in soil is Pre-Existing Contamination. Additionally, as the AST contained recovered oil like GP R 270 and GP R 1101, the presence of lead in soil is not the result of a release from GP U 767.

As shown on **Figure 13**, one constituent (i.e., cumene) was detected at concentrations above the applicable MSCs in groundwater at TG07-MW-08. Since there is no specific evidence of a Post-September 2012 release near this tank and because cumene is known to be present in groundwater in this area through Evergreen's Act 2 work, the presence of cumene in groundwater is concluded to be Pre-Existing Contamination.

The soil and groundwater contamination identified in proximity to this AST is Pre-Existing Contamination.

4.3.3 Allocation Summary

The data collected as part of the Site Assessment and Site Characterization activities have been evaluated in the context of other information and environmental sampling data for the Facility to determine whether contamination detected during Site Assessment and Site Characterization sampling is (1) Pre-Existing Contamination, (2) Post-September 2012 Contamination associated with a release from an AST, or (3) Post-September 2012 Contamination not associated with a release from an AST. As discussed in Section 4.3.2, Site Assessment and Site Characterization sampling has identified Pre-Existing Contamination which is in line with currently observed conditions. As agreed, the contamination identified by the Site Assessment and Site Characterization sampling will be addressed by Evergreen under their existing Act 2 Sites (eFACTS PF No. 769099 [AOI 6], 750870 [AOI 7], and 780190 [Philadelphia Refinery Sitewide]) (Pre-Existing Contamination). Accordingly, BDH will not be issuing a RAP per 25 Pa. Code § 245.311.

4.4 Ecological Screening Evaluation

Though the contamination identified in Tank Group 06 and 07 has been determined to be Pre-Existing Contamination and Stantec completed a Facility-wide Screening Level Ecological Risk Assessment (Stantec 2025b), which was approved by PADEP in May 2025, in accordance with 25 Pa. Code § 245.310(a)(28), an ecological screening evaluation was performed and conducted at the Site. The following describes the ecological screening evaluation that was performed for the Site. This evaluation was conducted in accordance with Section II.B.5 of the *Land Recycling Program Technical Guidance Manual* (PADEP 2021a). The regulatory framework for conducting an ecological screening evaluation under the SHS is outlined in Section II.B.2(e) and summarized in the Ecological Screening Flow Chart provided in Figure II-16 of the *Land Recycling Program Technical Guidance Manual* (PADEP 2021a). The key elements of the screening procedure are comprised of nine steps.

The initial screening phase of the process consists of Step 1, as follows:

- Step 1: Presence of Light Petroleum Product Constituents

As indicated on Figure II-16 of the L*and Recycling Program Technical Guidance Manual* (PADEP 2021a), after completion of the initial screen (Step 1), the remediator may be able to determine that no further ecological screening is required.

Step 1: Presence of Light Petroleum Product Constituents

The first step in the ecological screening process is to determine whether the constituents present in on-Site surface soil (soil at a depth of up to 2 ft) or sediment are related only to light petroleum products (i.e., gasoline, jet fuel A, kerosene, #2 fuel oil/diesel fuel), which have relatively low polycyclic aromatic hydrocarbon content (American Society for Testing and Material [ASTM] International E1739-95). If light petroleum product constituents (including benzene, toluene, ethyl benzene, and xylenes [total]) are the only constituents detected on-Site, then the screening process moves to Step 9 (Final Report: No Further Ecological Evaluation Required). As discussed in Section 4.3.1.1, light petroleum product constituents are present in the surface soil samples as well as lead. However, since lead is the only non-light petroleum product present in surface soil at concentrations greater than the applicable MSCs and BDH is not responsible for lead since it is Pre-Existing Contamination, no further ecological evaluation is required.

4.5 Data Quality Assurance, Quality Control, and Usability

While the Site Assessment and Characterization analytical data were not subject to formal data validation, elements were included to help assess data quality and usability of the results to support the project objectives. This included the collection of quality assurance/quality control samples, general quality control checks on the field and laboratory information, and an assessment of the impact of elevated reporting limits (RL) due to sample-specific interferences.

4.5.1 Quality Assurance/Quality Control Samples

During the Site Assessment/Characterization field activities, one trip blank sample per sample cooler and approximately one field blank per 10 samples was submitted to the analytical laboratory to evaluate potential cross-contamination during sample container shipment and storage. Results of the quality assurance and quality control sample analyses are provided in **Appendix H**. Ethyl benzene, toluene, xylenes, anthracene, BaP, Bbf, BghiP, fluorene, indeno, naphthalene, phenanthrene, and lead were detected in blank samples at concentrations greater than the laboratory RLs. These concentrations are within the range of constituent concentrations identified in the Tank Group 06 and 07 area. Because (1) the majority of the concentrations reported for the field blanks were below the laboratory RLs (i.e., J qualified) and (2) the contamination identified in Tank Group 06 and 07 has been determined to be Pre-Existing Contamination, these detections do not impact Site Assessment, Site Characterization, or associated cleanup decisions.

Approximately one field duplicate sample per every 20 soil samples was also collected to evaluate the variance in the sampling/analysis. Relative percent differences (RPD) for duplicate pairs were calculated and ranged from 0 to 199 percent with an average of 57 and 86 percent in Tank Group 06 and Tank

Group 07, respectively. Overall, RPDs <50 percent generally represent the typical level of variability. Reasons for a higher RPD can include sample heterogeneity or samples with high concentrations. Given that the predominant soil type sampled is anthropogenic fill some additional variability is expected and reasonable.

Approximately one field duplicate sample per every 20 groundwater samples was also collected to evaluate the variance in the sampling/analysis. RPDs for duplicate pairs were calculated and ranged from 0 to 199 percent with an average of seven percent in Tank Group 07.[27] Overall, RPDs <50 percent generally represent the typical level of variability.

4.5.2 General Quality Control Checks

General quality control checks were also performed on the field information and laboratory analytical deliverables. This included checking and reviewing laboratory logins and completed chains of custody, confirming that the requested analyte lists were reported, and that the sample nomenclature conformed to the proposed sampling scope of work. In some cases, multiple analyses were reported by the laboratory and a general review of elements such as surrogate recoveries, qualifiers, analytical limits, and laboratory narratives were performed to identify which results would be used for a given sample. A log of these general checks is provided in **Appendix H** along with the methodology used to select between multiple results when provided by the analytical laboratory.

4.5.3 Reporting Limits

For non-detect COCs, RLs were evaluated against the applicable MSCs. The maximum RLs for four COCs were above the MSCs, as summarized in the table below.

Reporting Limits Greater than MSCs

COC	Maximum Analytical Limits (mg/kg)	Non-Res DC MSC (mg/kg)	Non-Res Used Aquifer (TDS ≤ 2500) Soil-to-GW MSC (mg/kg)
12DBA	8.7	3.7	0.005
12DCA	17	85	0.5
Benzene	2.8	280	0.5
MTBE	35	8,500	2

Based on prior discussions with Alpha Analytical, Inc. (now Pace Analytical) and other PADEP-certified laboratories, USEPA Method 8260 provides laboratories with the ability to run the analysis via high-level or low-level vials, which is dependent on sample-specific conditions (i.e., interferences from non-target analytes). Samples may need to be diluted to be run via the high-level vial if an abundance of non-target analytes are present in the sample. In these situations, running via the low-level vial is not possible due to the non-target analyte interferences. This dilution results in higher method detection limits and RLs

[27] Field duplicates were not collected for groundwater samples in Tank Group 06.

for samples. Due to sample-specific conditions, resampling and reanalyzing soil to assess whether these compounds are present in soil is not a viable solution.

The maximum RLs for 12DBA, 12DCA, benzene, and MTBE exceeded the applicable MSCs. Exceedance rates were low for 12DCA, benzene, and MTBE (i.e., 5.6, 1.2, and 6.9 percent, respectively). The exceedance rate for 12DBA was higher at 25.8 percent. The locations with elevated RLs often coincide or are nearby samples of locations with concentrations exceeding the applicable MSCs for other chemicals, indicating no impact on Site Characterization conclusions or associated cleanup decisions. In situations where these locations are not in the vicinity of other locations with concentrations exceeding applicable MSCs, they are delineated by other locations with concentrations below the applicable MSCs or the tank containment berms. As the contamination identified in Tank Group 06 and 07 has been determined to be Pre-Existing Contamination, these exceedances also do not impact Site Characterization or associated cleanup decisions.

As discussed in Section 4.3.2, even if present due to a release(s) from a tank, since 12DBA and 12DCA were historically used as a scavenger for lead in anti-knock gasoline mixtures and up until the ban of leaded gasoline in the 1990s could have been present in gasoline-related releases to the environment, these concentrations would be associated with Pre-Existing Contamination. Similarly, since MTBE was phased out of use in 2006, these concentrations would be associated with Pre-Existing Contamination.

5 Selection of Standard

As described in Section 4.3.2, the data collected as part of the Site Assessment and Site Characterization activities have been evaluated in the context of other information and environmental analytical data for the Facility. These sampling efforts have identified Pre-Existing Contamination which is in line with currently observed conditions. As agreed, the contamination identified by the Site Assessment and Site Characterization sampling will be addressed under Act 2 by Evergreen (Pre-Existing Contamination).

Accordingly, a specific Standard for attainment has not been identified and BDH will not be issuing a RAP per 25 Pa. Code § 245.311.

6 Conceptual Site Model

6.1 Land and Groundwater Use

The area encompassing Tank Group 06 and 07 is being redeveloped. Current and reasonably anticipated future land use in the area of the Tank Groups is commercial/industrial.

Sampling and evaluation of the vapor intrusion pathway has not been conducted since there is no current vapor intrusion exposure in the area (i.e., vapor intrusion pathway is incomplete). In order to address the requirements under 25 Pa. Code § 245.309(c)(12), as referenced by 25 Pa. Code § 245.310(a) and 245.310(a)(32), as an institutional control, prior to their construction and occupancy, on-facility buildings which could be occupied in the future will be subject to vapor intrusion investigation and evaluation to determine if conditions (i.e., volatilization of COCs from soil, groundwater, and/or LNAPL) could pose an unacceptable risk to occupants. As needed, vapor mitigation systems (VMS) will be incorporated into the design and construction of such buildings as engineering controls where potentially unacceptable vapor intrusion risks are identified. These activities and use limitations will eliminate the potential for future unacceptable exposures to COCs at the Site via vapor intrusion.

Stemming from several efforts to assess the potential for current and reasonably anticipated future use of groundwater at and in the vicinity of the Facility in accordance with 25 Pa. Code § 245.310(a)(27), Evergreen has documented no confirmed drinking water supply wells within 1-mile of the Facility. As a result, groundwater on-Facility and off-Facility is not a current or reasonably anticipated future source of potable or nonpotable water.

6.2 Scenarios for Potential Human Exposure

Though the contamination identified at the Site is determined to be Pre-Existing Contamination, in accordance with 25 Pa. Code § 245.309(c)(14), § 245.310(a)(23), this section identifies potentially exposed populations (receptors) and their potential exposure pathways.

6.2.1 Potential On-Site Exposures

The current on-Site receptors include construction workers who may become exposed during site redevelopment or major construction activities and to a limited extent, trespassers, since access to the Facility is controlled with fencing and site security.

Reasonably anticipated future receptors at and in the immediate vicinity of the Site could include workers who may be exposed during the performance of typical or routine commercial activities (routine workers), maintenance workers who may become exposed during maintenance activities including minor subsurface repair/utility activities, construction workers, and trespassers.

Routine workers and trespassers could be exposed to COCs through incidental ingestion and dermal contact with COCs in exposed surface soil, inhalation of COCs in vapors and particulates from exposed surface soil, and inhalation of COCs in vapors from subsurface soil. Exposure of maintenance and construction workers could include incidental ingestion and dermal contact with COCs in exposed

surface and subsurface soil, inhalation of COCs in airborne particulates and vapors from exposed surface soil, and inhalation of COCs in vapors from subsurface soil.

Additionally, potential vapor intrusion exposure of routine workers, maintenance workers, construction workers, and trespassers could include exposure to COCs in vapors from both exposed surface soil and subsurface soil. However, such exposure is not currently a significant concern or anticipated to be one in the future, as BDH plans to address and eliminate potential risks via establishing environmental covenants and vapor mitigation systems as needed.

6.2.2 Potential Off-Site Exposures

Potential off-Site receptors under current and future conditions may include receptors who are off-Facility, or receptors who are off-Site (i.e., located outside of the Tank Groups), but still within other portions of the Facility. Off-Site receptors could include off-Facility residents, routine workers, construction workers, and maintenance workers. Potential exposure of off-Facility residents could include inhalation of COCs in airborne particulates and/or vapors from on-Site soil.

6.3 Species and Habitats of Concern

In accordance with 25 Pa. Code § 245.309(c)(5) and § 250.311(a), an ecological screening evaluation was performed and conducted at the Site. As discussed in Section 4.4, no further ecological evaluation is required.

6.4 Groundwater Contamination and the Significance of Fate and Transport

Though the contamination identified at the Site is determined to be Pre-Existing Contamination, in accordance with 25 Pa. Code §245.310(a)(23), the fate and transport of groundwater contamination in the Tank Group 06 and 07 area is discussed in this Section.

More than 200 groundwater monitoring or recovery wells have been installed within or near Tank Group 06 and 07 as part of prior investigations performed at the Facility. As discussed in the AOI 6 and AOI 7 RIRs (GHD 2017a; GHD 2017c), the aerial extent of groundwater contamination in the unconfined aquifer has been the result of groundwater flow along hydraulic head gradients and lower permeability soil beneath tanks. Groundwater and LNAPL recovery and in-situ remediation systems were installed in the northern portion of Tank Group 06 (i.e., No. 3 Separator Area – Girard Point), adjacent to the Schuylkill River and central portion of Tank Group 07 (i.e., 27 Pump House Passive Remediation System), south of the 700 Series Tanks. These systems have been effective in recovering LNAPL and in controlling the migration of groundwater contamination.

Because of the complexity associated with comingled impacts from a variety of sources and complicated hydrogeologic/groundwater flow conditions, Evergreen evaluated the nature and extent of groundwater contamination and its potential future fate and transport across the entire Facility in their 2025 Fate and Transport RIR (Stantec 2025a), which was approved by PADEP in April 2025 (PADEP 2025). The fate and transport modeling supplemented the extensive groundwater analytical data which, as noted by

Evergreen in their 2025 Fate and Transport RIR (Stantec 2025a), PADEP considered complete and sufficient to assess risks to human and ecological receptors. The fate and transport assessment, which involved predictive 30-year simulations of dissolved phase indicator parameters[28] (i.e., benzene, MTBE, naphthalene, BaP, and lead) under the conservative assumptions (i.e., sources of contamination will remain and assuming the remediation system wells are not pumping) demonstrates that the dissolved phase plumes will remain relatively stable or decrease in size and concentration over time through natural attenuation processes.

[28] As discussed in the AOI 6 RIR (GHD 2017c), the AOI 7 RIR (GHD 2017a), and the 2025 Fate and Transport RIR (Stantec 2025a), of the list of site-related constituents identified in groundwater, benzene and MTBE were chosen as the primary chemicals (qualitative proxies for other constituents) because of their water solubility, potential to be mobile in groundwater, and their persistence in groundwater at and near the Facility. MTBE was phased out of use in the early 2000s. As of 2006, MTBE has not been used in significant quantities as an additive to gasoline. As a result, the presence of MTBE in soil and groundwater helps to identify contamination that is associated with historical releases (e.g., pre-2006).

7 Summary and Conclusions

Terraphase has prepared this Report, on behalf of BDH, to detail the results of the Site Assessment and Site Characterization activities and to provide the supporting information demonstrating that adequate characterization has been performed for a reliable determination of the need for remedial measures based on the selected standard.

The Site Assessment and Site Characterization activities described in this Report were performed in accordance with the applicable provisions of Act 32, 25 Pa. Code § 245 (Subchapter D), and Terraphase's Work Plan (2021). The 28 ASTs addressed in this Report are:

- GP R 1039 (PADEP No. 049A)
- GP R 1038 (PADEP No. 050A)
- GP R 1047 (PADEP No. 011A)
- GP R 973 (PADEP No. 066A)
- GP R 286 (PADEP No. 028A)
- GP R 276 (PADEP No. 023A)
- GP R 281 (PADEP No. 025A)
- GP R 1117 (PADEP No. 005A)
- GP R 791 (PADEP No. 006A)
- GP R 798 (PADEP No. 007A)
- GP R 494 (PADEP No. 029A)
- GP R 1116 (PADEP No. 030A)
- GP R 1088 (PADEP No. 033A)
- GP R 250 (PADEP No. 019A)[29]
- GP R 285 (PADEP No. 027A)
- GP R 270 (PADEP No. 021A)
- GP R 272 (PADEP No. 022A)
- GP R 1101 (PADEP No. 047A)
- GP R 273 (PADEP No. 003A)
- GP R 284 (PADEP No. 004A)
- GP R 282 (PADEP No. 026A)
- GP R 790 (PADEP No. 034A)
- GP R 792 (PADEP No. 035A)
- GP R 793 (PADEP No. 036A)
- GP R 794 (PADEP No. 037A)
- GP R 799 (PADEP No. 039A)
- GP U 767 (PADEP No. 046A)
- GP R 251 (PADEP No. 020A)[29]

Visual observations of the on-site ASTs revealed no indications of release in the Categories 1 or 2 tanks, with the exception of GP R 281 in Tank Group 06. Interim actions and soil sampling indicate that the release identified at GPR 281 has been characterized to applicable MSCs.

Category 1 tanks (i.e., GP R 2000, GP U 1158, GP U 894, GP R 3003, GP R 3101A, GP R 2500, GP R 2501, GP 75A, GP 76A, GP 77A, GP 78A, GP R 796, GP U 1221, and GP 79A) showed no signs of release and remain classified as Category 1.

Based on the results of soil samples collected during the Site Assessment of Category 2 ASTs and a comparison to the applicable MSCs, no evidence of a release from five tanks (i.e., GP R 272, GP R 286, GP R 973, GP R 1039, and GP R 1047) in Tank Group 06 and three tanks (i.e., GP R 250, GP R 251, and GP R 1088) in Tank Group 07 were identified. These tanks remain classified as Category 2.

[29] Associated with Tank Group 07A.

The remaining eight tanks (i.e., GP R 270, GP R 273, GP R 276, GP R 281, GP R 282, GP R 284, GP R 285, GP R 1038, and GP R 1101) in Tank Group 06 and eleven tanks (i.e., GP R 494, GP R 790, GP R 791, GP R 792, GP R 793, GP R 794, GP R 798, GP R 799, GP R 1116, GP R 1117, and GP U 767) in Tank Group 07 identified concentrations in soil above the applicable MSCs and additional notifications of release were submitted to PADEP under Incident No. 58434 and Incident No. 57973, respectively. However, as discussed in Sections 4.3.2 and 4.3.3, Site Assessment and Site Characterization sampling have identified Pre-Existing Contamination at these tanks. Accordingly, the contamination identified by the Site Assessment and Site Characterization sampling in Tank Group 06 and Tank Group 07 will be addressed by Evergreen under their existing Act 2 Sites (eFACTS PF No. 769099 [AOI 6], 750870 [AOI 7], and 780190 [Philadelphia Refinery Sitewide]). Therefore, BDH will not be issuing a RAP per 25 Pa. Code § 245.311.

Notes:
Only constituents detected are shown.
The concentrations for the Xylene isomers (m/p and o) were summed before comparing to the criteria for Xylenes (total).
Ratios of concentration to the screening level greater than 1 are shaded in bold.
Chem Group - chemical group; INORG - metals; SVOC - semi-volatile organic compounds; VOC - volatile organic compounds

Notes:

Results shown for each location only consider the Short List 1-6 constituents and tetraethylene glycol which were analyzed within Tank Groups 06 and 07.

Only lead was detected at concentrations above the SGW MSCs in the vicinity of tank GP R 1038. Since the tank's primary contents was alkyl slurry, which would not be expected to have contained lead, it is not expected that lead would be present due to a release from this tank. As a result, these exceedances are excluded from the extent of soil greater than the MSCs.

Only benzene was detected at concentrations above the SGW MSCs at GPR270-14 and GPR270-19. Since these borings are located outside of GP R 270's berm boundary and no borings within the berm identified elevated benzene concentrations, it is likely these benzene exceedances are not tank-related and therefore are excluded from the extent of soil greater than the MSCs.

Only lead was detected at concentrations above the SGW MSCs in the vicinity of tank GP R 1117. The exceedances are delineated to north by location GPR270-14, which only identified levels benzene greater than the SGW MSCs, not lead.

Groundwater Sample Results

- Exceeds Non-Res Groundwater Used Aquifer (TDS ≤ 2500) MSC
- No Exceedances

Notes:
Exceedances identified only reflect sampling results for AST Short List 1-6 analytes.
Yellow highlighted BDH wells sampled only for LNAPL are assumed to have groundwater contamination.
Results shown for each well are the maximum concentrations from the two most recent groundwater sampling events from September 8, 2012 to May 31, 2024.

Result

MSC Exceeded

Qualifiers:
U -- Not Detected
J -- Estimated Concentration
--- Not Analyzed

Abbreviations:
DC -- Direct Contact
MSC -- Medium-Specific Concentration
SGW -- Soil-to-Groundwater

Exceedance Codes:
(A) Greater than NonRes Surface DC MSC
(B) Greater than NonRes Subsurface DC MSC
(C) Greater than NonRes Used Aquifer SGW MSC

Notes:
All concentrations are presented in mg/kg.
Results exceeding the MSCs are shaded.
Sample locations symbolizing NonRes DC exceedances indicate that either a surface sample exceeds the NonRes DC Surface MSC (0-2 ft) or a subsurface sample exceeds the NonRes DC Subsurface MSC (2-15 ft).

Result

MSC Exceeded

Qualifiers:
U -- Not Detected
J -- Estimated Concentration
-- -- Not Analyzed

Abbreviations:
DC -- Direct Contact
MSC -- Medium-Specific Concentration
SGW -- Soil-to-Groundwater

Exceedance Codes:
(A) Greater than NonRes Surface DC MSC
(B) Greater than NonRes Subsurface DC MSC
(C) Greater than NonRes Used Aquifer SGW MSC

Notes:
All concentrations are presented in mg/kg.
Results exceeding the MSCs are shaded.
Sample locations symbolizing NonRes DC exceedances indicate that either a surface sample exceeds the NonRes DC Surface MSC (0-2 ft) or a subsurface sample exceeds the NonRes DC Subsurface MSC (2-15 ft).

- No Exceedances

Evergreen Soil Sample Location

- Exceeds DC MSC
- Exceeds SGW MSC
- No Exceedances

Qualifiers:
U -- Not Detected
J -- Estimated Concentration
--- -- Not Analyzed

Abbreviations:
DC -- Direct Contact
MSC -- Medium Specific Concentration
SGW -- Soil-to-Groundwater

Exceedance Codes:
(A) Greater than NonRes Surface DC MSC
(B) Greater than NonRes Subsurface DC MSC
(C) Greater than NonRes Used Aquifer SGW MSC

Notes:
All concentrations are presented in mg/kg.
Results exceeding the MSCs are shaded.
Sample locations symbolizing NonRes DC exceedances indicate that either a surface sample exceeds the NonRes DC Surface MSC (0-2 ft) or a subsurface sample exceeds the NonRes DC Subsurface MSC (2-15 ft).

Qualifiers:
U -- Not Detected
J -- Estimated Concentration
- -- Not Analyzed
D -- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

Abbreviations:
DC -- Direct Contact
MSC -- Medium Specific Concentration
SGW -- Soil-to-Groundwater

Exceedance Codes:
(A) Greater than NonRes Surface DC MSC
(B) Greater than NonRes Subsurface DC MSC
(C) Greater than NonRes Used Aquifer SGW MSC

Notes:
All concentrations are presented in mg/kg.
Results exceeding the MSCs are shaded.
Sample locations symbolizing NonRes DC exceedances indicate that either a surface sample exceeds the NonRes DC Surface MSC (0-2 ft) or a subsurface sample exceeds the NonRes DC Subsurface MSC (2-15 ft).

- Exceeds DC MSC
- Exceeds SGW MSC
- No Exceedances

Evergreen Soil Sample Location

- Exceeds DC MSC
- Exceeds SGW MSC
- No Exceedances

Sample Location

GP8494-01	4.5-5(ft)
VOCs	
Benzene	0.025 U
Cumene	0.049 U
Ethyl Benzene	0.023 J
Toluene	0.049 U
1,2,4-Trimethylbenzene	0.22
1,3,5-Trimethylbenzene	0.06 J
SVOCs	
Benzo(a)pyrene	7.7
Naphthalene	1.3 J
Metals	
Lead	**517 (C)**

Sampling Depth

Result

MSC Exceeded

Chemical	{A} Non-Res Direct Contact with Surface Soil (0-2 ft) MSCs (mg/kg)	{B} Non-Res Direct Contact with Subsurface Soil (2-15 ft) MSCs (mg/kg)	{C} Non-Res Used Aquifer (TDS ≤ 2500) Soil-to-GW MSCs (mg/kg)
VOCs			
Benzene	280	330	0.5
Cumene	10000	10000	2500
Ethyl Benzene	880	1000	70
Toluene	10000	10000	100
1,2,4-Trimethylbenzene	4700	5400	300
1,3,5-Trimethylbenzene	4700	5400	93
SVOCs			
Benzo(a)pyrene	91	190000	46
Naphthalene	66	77	25
Metals			
Lead	1000	190000	450

Qualifiers:
U -- Not Detected
J -- Estimated Concentration
-- -- Not Analyzed

Abbreviations:
DC -- Direct Contact
MSC -- Medium Specific Concentration
SGW -- Soil-to-Groundwater

Exceedance Codes:
(A) Greater than NonRes Surface DC MSC
(B) Greater than NonRes Subsurface DC MSC
(C) Greater than NonRes Used Aquifer SGW MSC

Notes:
All concentrations are presented in mg/kg.
Results exceeding the MSCs are shaded.
Sample locations symbolizing NonRes DC exceedances indicate that either a surface sample exceeds the NonRes DC Surface MSC (0-2 ft) or a subsurface sample exceeds the NonRes DC Subsurface MSC (2-15 ft).

0 13 26 39 52 ft

1 Inch = 13 Feet

Exceedance Code:
[A] Non-Res GW Used Aquifer

Notes:
All concentrations are presented in mg/L. Results exceeding the MSCs are shaded. Interpreted groundwater flow is primarily based on the 2025 water-table elevation data prepared by Stantec in their Site-Wide Fate and Transfer RIR (Stantec 2025) and supplemented with water-table elevation data prepared by Terraphase (February 2023).
The current estimated extent of LNAPL is based upon the most recent gauging event at each location, which range from October 8, 2019 to October 28, 2024.
The current estimated extent of LNAPL was only estimated in AOI 6 and AOI7.
Evergreen's estimated extent of LNAPL is prepared by Stantec and documented in the AOI reports for the Facility and are based on gauging events completed between 2010 through 2016.

Subject: **Tank Group 07A Closure Report**
Former Philadelphia Energy Solutions Refinery
3144 West Passyunk Avenue, Philadelphia, PA

Dear Ms. Fazzino:

Terraphase Engineering Inc. (Terraphase) has prepared this *Tank Group 07A Closure Report* (Tank Closure Report), on behalf of Philadelphia Energy Solutions Refining and Marketing LLC (PESRM). This Tank Closure Report presents the alternate Site Assessment analytical results associated with Tank Group 07A (the "Site"). The results of the alternate Site Assessment activities support obtaining regulatory closure of aboveground storage tanks (ASTs) GP R 250 (PADEP No. 019A) and GP R 251 (PADEP No. 020A), known as Tank Group 07A, at the former Philadelphia Energy Solutions (PES) Refinery property located at 3144 West Passyunk Avenue in Philadelphia, Pennsylvania (**Figure 1**). The presence of standing water, determined to be shallow groundwater emergent at the ground surface, is present within the containment berm for former ASTs GP R 250 and GP R 251. This has prevented PESRM from being able to complete Site Assessment sampling in accordance with Terraphase's (2021) *AST Closure Work Plan*. Terraphase shared an alternative approach to complete Site Assessment sampling with the Pennsylvania Department of Environmental Protection (PADEP) on December 1, 2023. PADEP approved the alternate Site Assessment scope of work for Tank Group 07A in its correspondence dated December 6, 2023.

Background

The demolition and decommissioning of the subject ASTs began and was completed in September 2021. Prior to demolition, the primary products held within these tanks were Light Cycle Oil (GP R 250) and Untreated Distillate (GP R 251). Additional details regarding the size, contents, and construction of the tanks are provided in **Table 1**. On behalf of PESRM, JD2 Environmental, Inc. and ACI submitted to PADEP the required tank registration amendments, copies of which are provided as **Appendix A**. In addition, the Aboveground Storage Tank System Closure Report form (2630-FM-BECB0514) is included in **Appendix B**.

Alternate Site Assessment Sampling

Standing water has been observed within the containment berm for former ASTs GP R 250 and GP R 251 for several months. NorthStar Contracting Group, Inc. (NorthStar) conducted dewatering activities in the area but was unsuccessful. Additionally, Terraphase conducted a comparison of recent groundwater elevations to the surface elevation in the area and it indicated that groundwater is at an elevation similar to or greater than the ground surface elevation in the area of the two tanks. Terraphase also installed piezometers and measured groundwater levels between July 2023 and August 2023. The results of this monitoring indicated the groundwater elevation in the piezometers are greater than or equal to the elevation of the surface water during the majority of the gauging events and are provided in **Appendix C.** The PADEP agreed with this assessment.

Based on the preceding evidence demonstrating that the standing water in Tank Group 07A is in connection with groundwater, Site Assessment sampling could not be completed in accordance with the PADEP-approved *AST Closure Work Plan* (Terraphase 2021). As such, PESRM presented an alternative Site Assessment scope of work to PADEP representatives and submitted the scope on December 1, 2023, which PADEP approved on December 6, 2023.

Soil and groundwater sampling was completed by Terraphase and their subcontractor MB Drilling, LLC on December 15, 2023. Prior to the initiation of the sampling activities, a review of available information provided by Facility representatives regarding the presence/absence of underground utilities was used in the proposed sampling locations. In addition, a private locate was performed using geophysical and electromagnetic techniques to identify potential utilities or subsurface structures at proposed drilling locations.

Soil borings were completed using direct-push (i.e., Geoprobe) drilling methods and advanced to 5 feet below ground surface (ft bgs). Continuous soil cores were collected, and field screened using a photoionization detector to identify potentially impacted zones. Soil boring logs are provided in **Appendix D**. In total, seven soil borings were installed during the Site Assessment, as close in proximity to the ASTs and standing water as possible. Terraphase collected a soil sample from one 6-inch interval in each boring, as well as a field duplicate at boring GPR250-03. In addition, groundwater samples were collected from two nearby piezometers (previously installed to evaluate groundwater elevations in the area), and two surface water samples were collected from the standing water within the TG07A secondary containment berms. A field duplicate sample was collected at piezometer TG07A-PZ01. Site Assessment sampling locations are depicted on **Figure 2**.

Soil, groundwater, and surface water samples were analyzed for Short List 1-5[1]. Laboratory analytical services were provided by Alpha Analytical, Inc. of Westborough, Massachusetts, which is a PADEP-certified laboratory. Samples submitted for analyses were placed directly into laboratory provided glassware and stored on ice in a cooler under appropriate chain of custody protocol.

[1] Short List 1-5 includes analytes benzene, cumene, 1,2-dibromoethane, 1,2-dichloroethane, ethyl benzene, toluene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, methyl tert-butyl ether, xylenes, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(ghi)perylene, chrysene, fluorene, naphthalene, phenanthrene, pyrene, and lead.

Sampling Results

Soil sampling results were compared to the following Non-Residential (Non-Res) Medium Specific Concentrations (MSCs) to help identify potential releases to the environment from the ASTs and their associated piping:

- Non-Res Direct Contact (DC) Numeric Values for Surface Soil (0-2 ft bgs)
- Non-Res DC Numeric Value for Subsurface Soil (2-15 ft bgs)
- Non-Res Soil-to-Groundwater (SGW) Numeric Values for Used Aquifers (Total Dissolved Solids [TDS] ≤ 2,500)

As presented in **Table 2a**, none of the Site Assessment soil samples collected in proximity to GP R 250 or GP R 251 exhibited concentrations greater than the applicable MSCs. **Figure 2** presents the spatial distribution of the soil sampling locations. **Appendix E** provides copies of the laboratory data packages.

Groundwater and surface water[2] sampling results were compared to the following Non-Res MSCs to help identify potential releases to the environment from the ASTs and their associated piping:

- Non-Res Groundwater Numeric Values for Used Aquifers (TDS ≤ 2,500)

As presented in **Table 2b**, none of the Site Assessment groundwater or surface water samples collected in proximity to GP R 250 or GP R 251 exhibited concentrations greater than the applicable MSCs. **Figure 2** presents the spatial distribution of the groundwater sampling locations. **Appendix E** provides copies of the laboratory data packages.

Conclusion

Terraphase has prepared this Tank Closure Report, on behalf of PESRM, to detail the results of the alternate Site Assessment activities in Tank Group 07A. The specific ASTs addressed in this Tank Closure Report include GP R 250 (PADEP No. 019A) and GP R 251 (PADEP No. 020A).

Visual observations of the ASTs in Tank Group 07A revealed no indications of release. Based on the soil, groundwater, and surface water results, no evidence of a release from GP R 250 or GP R 251 was identified. The Site Assessment outcome for the two tanks was "No Obvious Contamination – Sample Results Meet Action Levels." Based on the information presented, PESRM has overcome the presumption of liability under Act 32 as detailed in 25 PA Code §245.303(d) and respectfully requests closure of tanks GP R 250 and GP R 251 in Tank Group 07A.

Sincerely,

for Terraphase Engineering Inc.

Kevin Long
Principal Consultant

Nicholas J. Scala
Principal Geologist, PG, LSRP

[2] Based on the evidence demonstrating that the standing water in Tank Group 07A is in connection with groundwater, the surface water results were compared to the applicable groundwater MSCs.

PADEP Storage Tanks Registration/Permitting Application Form
PADEP Facility ID #51-33624 - Girard Point Refinery

Dear PADEP:

On behalf of our client, JD2 Environmental, Inc. (JD2) is attaching the Pennsylvania Department of Environmental Protection's (PADEP's) Storage Tanks Registration/Permitting Application Form for the removal of the following aboveground storage tanks (ASTs):

Facility Name	PADEP Facility ID #	PADEP Tank ID #	Owner Tank ID #	AMS Tank ID #	Removal Date
Girard Point Refinery	51-33624	019A	GP 250	P-009	9/29/2021
Girard Point Refinery	51-33624	020A	GP 251	P-010	9/29/2021

If you have any questions regarding this submittal, please do not hesitate to contact me at (610) 430-8151.

Sincerely yours,

JD2 ENVIRONMENTAL, INC.

Kristian Satterthwaite

Phila Ref Girard Point
Facility Name

DEP USE ONLY
Client ID#
Site ID#
Account #
Auth ID#
APS ID#
Master Auth ID#

I. PURPOSE OF SUBMITTAL

INITIAL (Applies to First-Time Facility Registration)

- ☐ Register Tanks(s) to be Used*
- ☐ Register Tank(s) to be Removed
- ☐ Register Tank(s) to be Temporarily Out of Use
- ☐ Register Tank(s) to be Closed in Place

AMENDED (Applies to Currently Registered Tank(s) or Existing Facility)

- ☐ Changed Owner Information
- ☐ Changed Facility Information
- ☐ Changed to Currently In Use Tank(s)*
- ☐ Changed to Temporarily Out of Use Tank(s)
- ☐ Changed Product
- ☐ Changed Contact Information
- ☐ Changed Facility Operator Information
- ☐ Added Tank(s) to Existing Facility*
- ☒ Changed to Permanently Closed Tank(s)/Removed
- ☐ Changed to Exempt Tank(s)

CHANGE OF OWNERSHIP

- ☐ Tanks Changed Ownership and Remain at Same Facility*

* **For Underground Storage Tanks (UST), attach the UST Operator Training Documentation Form (2630-PM-BECB0514a) and copies of the Class A and Class B operator training certificates.**

II. CURRENT OR NEW TANK OWNER / CLIENT INFORMATION

VIII. ABOVEGROUND & UNDERGROUND TANK INFORMATION FOR PERMANENT CLOSURE

Write the Tank Number(s) and place an ☒ in the appropriate box for each tank that was removed or closed in place.

Items 2 & 3 below apply to large ASTs and all USTs	Tank # 019A	Tank # 020A	Tank #	Tank #	Tank #	Tank #
1. Contamination suspected or observed and notification of contamination form was submitted to the appropriate DEP regional office.	☐	☐	☐	☐	☐	☐
2. Closure document submitted to the appropriate DEP regional office.	☒	☒	☐	☐	☐	☐
3. Closure document kept on file by owner.	☒	☒	☐	☐	☐	☐

IX. OWNER CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. This registration is conditioned upon compliance with provisions of the Storage Tank and Spill Prevention Act of 1989, all applicable regulations, and with the requirements for obtaining and maintaining a permit required under this Act. I certify my responsibility for assuring the following permit requirements:

- Storage tank systems are in compliance with applicable administrative, technical and operational requirements as specified in Subchapter E for underground tanks or Subchapter F or G for aboveground tanks.
- Tank handling and inspection activities are performed by an individual possessing DEP certification in the appropriate category as required in Subchapters A and B.
- Underground storage tanks meet the applicable financial responsibility requirements of Subchapter H (relating to financial responsibility requirements).
- A Spill Prevention Response (SPR) Plan must be submitted to the appropriate DEP regional office for facilities that have aboveground storage tanks where the total capacity of all aboveground tanks is greater than 21,000 gallons.
- Other state and local permits required for operation of the tank system have been attained.

My signature represents to the Department that I own the storage tank(s) and am aware of the responsibilities and potential liabilities as an "owner" arising under the Storage Tank and Spill Prevention Act of 1989 and all applicable regulations. I am also advised that statements made on this registration is made subject to the penalties of 18 PA. C.S.A. Section 4904 relating to unsworn falsification to authorities.

Type or Print Owner Name Gary Bowman

X. INSTALLER / REMOVER CERTIFICATION

This section must be completed by the certified tank handler(s) who is responsible for the installation or removal from service of the aboveground and underground storage tank systems listed in Section VI. Tank modification activity must be submitted on a "Tank Modification Report" form.

SIGNATURE & CERTIFICATION OF INSTALLER(S) / REMOVER(S)

As the certified tank handler responsible for the tank handling activities in the category or categories listed, I certify that all tank handling activities were conducted in compliance with the design, installation and operation standards of the Storage Tank and Spill Prevention Act of 1989 and all applicable regulations. I also certify, under penalty of law as provided in 18 PA C.S.A. 4904 (relating to unsworn falsification to authorities), that the information provided therein is true, accurate and complete to the best of my knowledge and belief.

Tank#	Installer/Remover Name	Construction Standard	Individual Certification#	Certification Category	Company Certification#	Installer/Remover Signature	Date

020A	Kristian Satterthwaite		5081	AFR	1557	Kristian Satterthwaite	10/26/21

XI. INSPECTOR CERTIFICATION

This section must be completed by the DEP Certified Tank Inspector(s) who is responsible for verifying the installation standards for field constructed tanks and aboveground tanks greater than 21,000 gallons listed in Section VI. (Type or Print legibly) A DEP Certified Inspector may also be responsible for inspecting existing ASTs which are entering regulated service for the first time with no tank handling activities.

SIGNATURE & CERTIFICATION OF INSPECTOR(S)

As the certified tank inspector responsible for verifying tank handling activities and construction standards, I certify that the tank(s) listed below are constructed to appropriate industry standards and, if applicable, to manufacturer's specifications; that the tank(s) have been tested as required by industry standards; and that the tank(s) meet or exceed applicable design and operating standards; and are in compliance with the requirements of the Storage Tank and Spill Prevention Act of 1989, and all applicable regulations. I also certify under penalty of law as provided in 18 PA C.S.A. 4904 (relating to unsworn falsification to authorities), that the information provided herein is true, accurate and complete to the best of my knowledge and belief.

Describe Closure Activities:

The tanks and associated piping were evacuated of any sale-able product, which was consolidated / bulked and eventually sold. All materials were either transferred to a slop oil tank through existing piping at the facility or via vacuum truck. When feasible the lines were drained back to the tank, and any product removed using a vacuum truck and stored with the other bulked products for future sale. The associated piping was then cleaned using copious amounts of water, high pressure water and /or purged with air or an inert gas such as nitrogen. Some heavy oil lines were flushed using cutter stock before using water. When required, a thermal Oxidizer was utilized to reduce the LEL inside the tank prior to opening and performing Confined Space Entry for cleaning. When necessary or prudent tanks and/or piping were also purged by pulling the internal atmosphere through activated carbon. Once the piping was cleaned, verification was conducted via a physical walk-down of the system, and painting valves and piping green as each was confirmed to be open and empty. The piping and utilities were then air gapped by the mechanical contractor (Nooter). Air gapping was followed by the simultaneous removal of the piping system and the cleaning the interior of the tank. Interior cleaning was conducted by one of three subcontracted industrial services companies (ACV Enviro, MPW, EISCO) and included when necessary the removal of floating roof seals (EFR/IFR). Pontoons were also inspected prior to demolition and if found to contain free product, they were evacuated and the product consolidated with the other like products stored for future sale. All cleaning water and rinsates were collected via vacuum truck and water was decanted at the wash pad leading to the the on-site WWTPs. The remaining sludges and tank bottoms were stabilized with water absorbing polymers and or organic products such as kiln dried sawdust to ensure no free liquids in transit. The material was then loaded into intermodal containers (maximum 24 tons per container and 6 containers per rail car), placed on rail cars. Bills of lading were generated and sent to the railroad to schedule for pickup. The material was managed under 40 CFR 261.4(a)(24) verified recycling exemption and transported by rail to CWM in Sulphur, LA. Upon completion of the cleaning process the tanks and any remaining piping were dismantled, loaded into scrap recycling trucks and/or containers weighed at the facility scale and transported to a local scrap recycling company.

Yes **N/A**

11. Briefly describe the storage tank facility and the nature of the operations which were conducted at the facility (both historical and present) **including use of the storage tank systems:**

    Tank Group 07A was located in the south-central portion of the Former Philadelphia Refinery Complex. The tanks in the group held a variety of materials associated with the petroleum refining process.

☒ ☐ 12. A site location and sampling map of the site, drawn to scale, is attached. See page 11 of 11.

☒ ☐ 13. Original, color photographs of the closure process involving any excavation are attached (i.e., inside of excavation/piping runs, pit water, containment structure and foundation showing condition).

☒ ☐ 14. An amended "Storage Tanks Registration/Permitting Application" Form was submitted to the DEP, Bureau of Environmental Cleanup and Brownfields, Division of Storage Tanks, P.O. Box 8762, Harrisburg, PA 17105-8762.

Date: 10 / 4 / 2021

☐ ☒ 15. If a release was confirmed, the appropriate regional office of DEP was notified by the owner or operator.

Date: ___/____/_____ Office: _____

Yes	N/A	
☒	☐	16. If tanks were cleaned on-site:

a. Briefly describe the disposition of usable product: Usable product was drained from the tanks prior to cleaning and transferred to other on-site storage tanks. The useable product was consolidated and sold. Any residual product was discharged to the on-site process sewer and wastewater treatment system.

b. Briefly describe the disposal of unusable product, sludges, sediments, and wastewater generated during cleaning. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):
All tank bottoms to include sediments, sludges containing recoverable oil were managed in accordance with 40 CFR261.4(a)24. When shipped by rail to CWM in Sulphur, LA, the material was solidified using organic agents such as kilndried sawdust to ensure no free liquid during trasnsit, then placed into Inter-modal containers, loaded onto railcars, properly placarded and BOL's were generated and provided to the railroad. When transported to SAREX in West Deptford, NJ, the material was transporterd via vacuum truck and managed under the same exemption 40 CFR 261.4(a)(24). Any wastewater generated from cleaning was treated through the onsite waste water treatment plants (NPDES Permit #s 0012629 (Point Breeze) and 0011533 (Girard Point). Generator ID # PAD 0497910-98.

c. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: PAD 04979109

(2) Licensed Hazardous Waste Transporter Name and ID Number: Dana Transport, HW ID #40106; Chemical Waste Management - LA 0000777201, BNSF Railway Company - LA 000147272

☐	☒	17. If tanks were removed from the site for cleaning:

a. Provide the name and permit number of the processing, treatment, storage or disposal facility performing the tank cleaning:

b. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: _____

(2) Licensed Hazardous Waste Transporter Name and ID Number: _____

_____

18. Briefly describe the disposition of tanks/piping (Attach documentation of proper disposal):
All tanks and associated piping were cleaned, demolished and recycled for scrap value. Pipe and tank scrap was not segregated for transportation to the scrap facility; therefore, a specific quantity of piping or, tank scrap was not detailed in disposal documentation.

☐ ☒ 19. If contaminated soil is excavated:

a. Briefly describe the disposition and amount _____ (tons) of contaminated soil. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):

b. If contaminated soil is determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: _____

(2) Licensed Hazardous Waste Transporter Name and ID Number: _____

Yes **N/A**

☐ ☒ 20. Briefly describe the disposition of and amount _____ (tons) of uncontaminated soil and debris (attach analyses):

☐ ☒ 21. If the tanks were "Closed-in-Place" provide information below:

a. Briefly describe the tank cleaning process: _____

b. If subcontracted, name and address of company that performed the tank cleaning:

c. How were tanks marked/labeled with permanent closure date: _____

I, Philadelphia Energy Solutions Refining And Marketing LLC (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the owner of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

Title

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION II. Tank Handling Information

Facility ID Number 51 - 33624
DEP Tank ID Number(s) 019A, 020A

Yes N/A

1. Briefly describe the excavation and initial on-site staging of uncontaminated/contaminated soil and debris:

   Removed tank and piping debris was segregated and loaded into roll-off containers during demolition. Soil excavation was not completed at the time of AST removal.

2. Briefly describe the method of piping system closure and the closure of the piping systems including the quantity and condition of the piping:

   All the pertinent tank and piping system locations requiring sampling for closure purposes were documented, cleaned, demolished, and recycled for scrap value. In some cases, air gapping and removal of tank system piping prior to the demo of the tank was conducted. No problems or issues concerning the condition of the piping systems were reported.

3. Briefly describe the condition of the tanks and any problems encountered during tank handling or tank removal activities:

   None reported.

4. Briefly describe the method used to purge the tanks of and monitor for hazardous or explosive vapors:

   Vapors were monitored via a LEL meter. The tanks and associated piping were evacuated of any sale-able product and then cleaned using copious amounts of water, high pressure water and /or purged with air or an inert gas such as nitrogen. Some heavy oil lines were flushed using cutter stock before using water. When required, a thermal oxidizer was utilized to reduce the LEL inside the tank prior to opening and performing Confined Space Entry for cleaning. When necessary or prudent tanks and/or piping were also purged by pulling the internal atmosphere through activated carbon.

☒ ☐ 5. If tanks were cleaned on-site:

   a. Briefly describe the tank cleaning process: The subcontracted companies used to clean tanks were ACV ENVIRO, EISCO, and MPW. Tanks were drained, cut open, rinsed and scrubbed clean of any residuals before demolition. See additional detail on page 3.

   b. If subcontracted, name and address of company that performed the tank cleaning:

      NorthStar Contracting Group, Inc., 2250 East Adams Avenue, Philadelphia, PA 19124
      ACV Enviro, 2527 Market Street, Aston PA 19014
      EISCO, 288 Oak Grove Road, Swedesboro, NJ 08085
      MPW, 9711 Lancaster Road SE, Hebron, OH 43025

☐ ☒ 6. If tanks were “Closed-in-Place”, briefly describe how tanks were rendered inoperative, marked permanently closed with date, vented and secured to prevent unauthorized entry:

☐ ☒ 7. If contamination was suspected or observed, the "Notification of Contamination" form was submitted.

I, Kristian Satterthwaite (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the certified remover who performed the tank handling activities associated with the closure of the above referenced storage tank(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 019A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 1 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ------→ Conduct confirmatory sampling ------→ See end of this section for options on submission and maintenance of closure records ------→ Do not complete item C.2. below.

☐ YES ------→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):_____

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):_____

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

Facility Name and ID: -

County:

Township/Borough: See attached Figure

Table 1 - 019A (GP R 250)
Sample/Analysis Information (Attachment for Section III.)

SECTION III. Site Assessment Information

Tank Registration # 020A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 1 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO - - - - - → Conduct confirmatory sampling - - - - - → See end of this section for options on submission and maintenance of closure records - - - - - → Do not complete item C.2. below.

☐ YES - - - - - → Report release to DEP within 24 hours - - - - → Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):_____

_____

_____

_____

_____ - - - - → Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES - - - - → Remove or remediate contaminated soil - - - - → Conduct confirmatory sampling - - - - → See end of this section for options on submission and maintenance of closure records.

☐ NO - - - - → Continue Interim Remedial Actions - - - - → See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO - - - - → Conduct confirmatory sampling - - - - → See end of this section for options on submission and maintenance of closure records.

☐ YES - - - - → Report release to DEP within 24 hours - - - - → Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):_____

_____

_____

_____

Continue with corrective action - - - - → See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long (Print Name), hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

RECEIVED subject to the classifications and tariffs In effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry *to* Us usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp	
Per:		Date: 12/23/2021	Per:	Date:

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

Designated Consignee: Chemical Waste Management, Inc Certification of receipt of materials

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp		
Per:		Date:	Per: Luis Castro		Date: 2/2/22

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp		
Per:	[signature]	Date:	Per: Luis Castro		Date: 2/2/22

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 8. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to Us usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp		
Per:	[signature]	Date: 2/18/2022	Per: Luis Castro	Date: 2/18/22	

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 2/18/2022	Per: Luis Castro	Date: 2/18/22

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry *to* Us usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 2/23/2022	Per: Luis Castro	Date:

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

		ERG# 171 H039			

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 2/23/2022	Per: Luis Castro	Date:

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bills of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 2/23/2022	Per: Luis Castro	Date: 2/23/20

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201 (a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

December 26, 2023: This final report includes the results of all requested analyses.

December 22, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Microextractables

L2374526-10, -11, and WG1868000-3: The sample was in improper preservative. The 8011 compound was analyzed from an HCl preserved vial.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly O'Neill

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADEPHIA REFINERY	**Lab Number:**	L2374526
Project Number:	P044.001.002	**Report Date:**	12/26/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADEPHIA REFINERY	**Lab Number:**	L2374526
Project Number:	P044.001.002	**Report Date:**	12/26/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

December 27, 2023: The Volatile Organics analyte list has been amended on L2374524-01 through -07.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2374524-07: A sample identified as "TG07A-PZ01-231215D" was received, but not listed on the Chain of Custody. At the client's request, this sample was analyzed.

Microextractables

L2374524-01, -02, -03, -04, -05, -06, and -07: The sample was in improper preservative. The 8011 compound was analyzed from an HCl preserved vial.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Caitlin Walukevich

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADELPHIA REFINERY	**Lab Number:**	L2374524
Project Number:	P044.001.002	**Report Date:**	12/27/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADELPHIA REFINERY	**Lab Number:**	L2374524
Project Number:	P044.001.002	**Report Date:**	12/27/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

October 4, 2023 *Technical Memorandum – Tank Group 07A Gauging Summary* prepared by Terraphase Engineering on behalf of PESRM

Technical Memorandum

To:	Lisa Strobridge, PG Department of Environmental Protection Southeast Regional Office	From:	Terraphase Engineering Inc.
cc:	Philadelphia Energy Solutions Refining and Marketing LLC c/o Joseph Jeray, PE, Vice President Hilco Redevelopment Partners		
Date:	October 4, 2023	Project No.:	P044.001.002
Subject:	**Tank Group 07A Gauging Summary** **Former Philadelphia Energy Solutions Refinery, Philadelphia, PA**		

Terraphase Engineering Inc. (Terraphase) prepared this memorandum, on behalf of the Philadelphia Energy Solutions Refining and Marketing LLC (PESRM), to present results of water level monitoring in the Tank Group 07A area. The results of the monitoring will be used to support obtaining regulatory closure of the tanks GP R 250 and 251, known as Tank Group 07A, at the former Philadelphia Energy Solutions (PES) Refinery property located at 3144 Passyunk Avenue in Philadelphia, Pennsylvania. Specifically, if groundwater levels do not lower to a point where Site Assessment samples can be collected, this information will be utilized to support an alternate sampling scope proposal to the Pennsylvania Department of Environmental Protection (PADEP).

Background

Standing water has been observed within the containment berm for former tanks GP R 250 and 251 for several months. The water was initially considered to be pooled stormwater that would evaporate and eventually dry to allow for soil sampling. NorthStar Contracting Group, Inc. conducted dewatering activities in the area. A diesel-powered trash pump was operated for over 175 hours in an attempt to remove the standing water. The dewatering effort was unsuccessful, as soil conditions were still considered too saturated for sampling.

In addition, Terraphase has conducted a comparison of recent groundwater elevations to the surface elevation in the area. The analysis indicated that groundwater is at an elevation similar to or greater than the ground surface elevation in the area of the two tanks.

These two lines of evidence indicate that the standing water present in the GP R 250 and 251 tank containment area is likely daylighted groundwater. During a call on May 11, 2023, PADEP suggested that piezometers be installed to further evaluate standing water/daylighted groundwater observed in the GP R 250 and 251 tank containment area.

Piezometer Installation

On July 7, 2023, Terraphase installed two AMS™ stainless steel drive-point piezometers (TG07A-PZ-01 and TG07A-PZ-02) near the edge of the standing water surrounding the former locations of GP R 250 and 251. Piezometer TG07A-PZ-01 was installed east of the tank berm. Piezometer TG07A-PZ-02 was installed in a constructed access ramp on the western side of the area. The piezometer locations are depicted on Figure 1.

The piezometers were installed using hammer drill. The AMS™ stainless steel drive-point piezometers contain a 14-inch-long slotted screen. Each point was installed to intercept the anticipated groundwater table based on historical groundwater elevations in surrounding wells. TG07A-PZ-01 and TG07A-PZ-02 were installed to a depth of approximately 2 feet bgs and the stainless-steel rod attached to the screen was allowed to stick up above the ground surface. A hydrated bentonite seal was placed around the point at ground surface to prevent surface water infiltration. Neither of the piezometers was located within the observed standing water, nor was standing water observed at the ground surface of the piezometer locations during the weekly monitoring (discussed below). The location and elevation of each piezometer was surveyed by Vargo Associates of Franklinville, NJ.

Weekly Monitoring

Terraphase measured groundwater levels in the new piezometers (see Figure 1) daily from July 11 through July 14, 2023, then the monitoring was performed weekly for an additional 5 weeks through August 18, 2023. In addition, photographs were taken during each weekly gauging event to document the standing water conditions. A photolog depicting the conditions of the area is provided in Attachment A. Lastly, Terraphase marked a measuring point location on the concrete containment wall along the southern portion of the tank group, and the measuring point location was also surveyed by Vargo. The concrete measuring point allowed for a direct measurement of the standing water located within the tank group.

During each monitoring event, groundwater level measurements were collected from each of the monitoring points using an electronic water level indicator. Groundwater elevations were then calculated as summarized in Table 1. As shown on Table 1, the groundwater elevation in piezometer TG07A-PZ-01 was greater than or equal to the elevation of the surface water (as measured from the measuring point on the concrete wall) during all nine gauging events. The groundwater elevation in TG07A-PZ-02 was greater than or equal to the elevation of the surface water in six of the nine sampling events and was within 0.05 ft of the surface water elevation in the other gauging events. These measurements indicate that the surface water in TG07A is daylighted groundwater.

Based on this analysis, PESRM would like to re-visit our discussion regarding an alternative Site Assessment sampling approach. Please let us know when you are available to discuss.

Key to Log of Boring

Sheet 1 of 1

Depth (feet)	Recovery (inches)	Sample Type	USCS Symbol	Graphic Log	MATERIAL DESCRIPTION	PID Reading, ppm	REMARKS AND OTHER TESTS
1	2	3	4	5	6	7	8

COLUMN DESCRIPTIONS

1. Depth (feet): Depth in feet below the ground surface.
2. Recovery (inches): Percent Recovery
3. Sample Type: Type of soil sample collected at the depth interval shown.
4. USCS Symbol: USCS symbol of the subsurface material.
5. Graphic Log: Graphic depiction of the subsurface material encountered.
6. MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
7. PID Reading, ppm: The reading from a photo-ionization detector, in parts per million.
8. REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
Silty GRAVEL (GM)
Poorly graded GRAVEL (GP)
Well graded GRAVEL (GW)
SILT, SILT w/SAND, SANDY SILT (MH)
Silty SAND (SM)
Well graded SAND (SW)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Grab Sample

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting, AW)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

December 27, 2023: The Volatile Organics analyte list has been amended on L2374524-01 through -07.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2374524-07: A sample identified as "TG07A-PZ01-231215D" was received, but not listed on the Chain of Custody. At the client's request, this sample was analyzed.

Microextractables

L2374524-01, -02, -03, -04, -05, -06, and -07: The sample was in improper preservative. The 8011 compound was analyzed from an HCl preserved vial.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Caitlin Walukevich

Project Number:	P044.001.002	**Report Date:**	12/27/23

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADELPHIA REFINERY	**Lab Number:**	L2374524
Project Number:	P044.001.002	**Report Date:**	12/27/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADELPHIA REFINERY	**Lab Number:**	L2374524
Project Number:	P044.001.002	**Report Date:**	12/27/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 524.2: THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

December 26, 2023: This final report includes the results of all requested analyses.

December 22, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Microextractables

L2374526-10, -11, and WG1868000-3: The sample was in improper preservative. The 8011 compound was analyzed from an HCl preserved vial.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly O'Neill

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADEPHIA REFINERY	**Lab Number:**	L2374526
Project Number:	P044.001.002	**Report Date:**	12/26/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER PHILADEPHIA REFINERY	**Lab Number:**	L2374526
Project Number:	P044.001.002	**Report Date:**	12/26/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 524.2: THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Hi Nick,
We've reviewed your submittal and agree that this looks sufficient to demonstrate you have a clean closure for these tanks. Please include the submittal and this email within your forthcoming Site Characterization Report for Tank Group 7.

Thanks,
Chelsea

Subject: Bellwether District Holdings, LLC Release Investigation Report – Tank Group 06 and Tank Group 07
3144 West Passyunk Avenue, Philadelphia, PA 19145

Dear Ms. Fazzino,

Evergreen Resources Group, LLC (Evergreen) has reviewed Terraphase Engineering Inc.'s *Release Investigation Report – Tank Group 06 and Tank Group 07*, written on behalf of Bellwether District Holdings, LLC (BDH). The data collected during BDH's investigation activities generally align with data collected by Evergreen as part of our ongoing Act 2 activities for the former refinery property and the Tank Group 06 and 07 area is being managed by Evergreen within our Act 2 Site. Available data for the Tank Group 06 and 07 area has been incorporated into recent Fate & Transport, Human Health Risk Assessment, and Cleanup Plan activities and will be considered in the forthcoming Final Report activities under primary facility ID 780190.

Regards,

Evergreen Resources Management Operations

Describe Closure Activities:

The tanks were drained via the in-place piping systems. Associated piping was also drained. Residual product was retained for use in other areas of the Former Philadelphia Refinery Complex. The interiors of tanks were cleaned. The tanks and piping were dismantled and removed from the site for disposal. When encountered, double bottoms were excavated and removed at a later date.

Yes **N/A**

11. Briefly describe the storage tank facility and the nature of the operations which were conducted at the facility (both historical and present) **including use of the storage tank systems:**

    Tank Group 07 was located in the south-central portion of the Former Philadelphia Refinery Complex. The tanks in the group held a variety of materials associated with the petroleum refining process.

☒ ☐ 12. A site location and sampling map of the site, drawn to scale, is attached. See page 11 of 11.

☒ ☐ 13. Original, color photographs of the closure process involving any excavation are attached (i.e., inside of excavation/piping runs, pit water, containment structure and foundation showing condition).

☒ ☐ 14. An amended "Storage Tanks Registration/Permitting Application" Form was submitted to the DEP, Bureau of Environmental Cleanup and Brownfields, Division of Storage Tanks, P.O. Box 8762, Harrisburg, PA 17105-8762.

Date: 10 / 4 / 2021

☒ ☐ 15. If a release was confirmed, the appropriate regional office of DEP was notified by the owner or operator.

Date: 8 / 10 / 2022 Office: Southeast

Yes **N/A**

☒ ☐ 16. If tanks were cleaned on-site:

a. Briefly describe the disposition of usable product: Usable product was drained from the tanks prior to cleaning. Any residual product was discharged to the on-site process sewer and wastewater treatment system.

b. Briefly describe the disposal of unusable product, sludges, sediments, and wastewater generated during cleaning. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):
Tank Bottoms were stabalized prior to being transported offsite for disposal as hazardous secondary materials and shipped via railcar to Chemical Waster Management Inc at 7170 John Brannon Road, Sulphur, LA 70665. Remaining waste was discharged to the facility process sewer and wastewater treatment system.

c. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: PAD 04979109

(2) Licensed Hazardous Waste Transporter Name and ID Number: LA 0000777201, LA 000147272

☐ ☒ 17. If tanks were removed from the site for cleaning:

a. Provide the name and permit number of the processing, treatment, storage or disposal facility performing the tank cleaning:

b. If tank contents were determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: _____

(2) Licensed Hazardous Waste Transporter Name and ID Number: _____

18. Briefly describe the disposition of tanks/piping (Attach documentation of proper disposal):
All tanks, associated piping were cleaned, demolished and recycled for scrap value.

☐ ☒ 19. If contaminated soil is excavated:

a. Briefly describe the disposition and amount _____ (tons) of contaminated soil. Provide the name and permit number of the processing, treatment, storage or disposal facility. (Attach documentation of proper disposal):

b. If contaminated soil is determined/deemed to be hazardous waste, provide:

(1) Generator ID Number: _____

(2) Licensed Hazardous Waste Transporter Name and ID Number: _____

_____

Yes	N/A		
☐	☒	20.	Briefly describe the disposition of and amount _____ (tons) of uncontaminated soil and debris (attach analyses):

_____

_____

_____

☐	☒	21.	If the tanks were "Closed-in-Place" provide information below:

a. Briefly describe the tank cleaning process: _____

_____

b. If subcontracted, name and address of company that performed the tank cleaning:

_____

c. How were tanks marked/labeled with permanent closure date: _____

_____

_____

I, Anne R. Garr, Assistant Secretary, hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating
(Print Name)
to unsworn falsification to authorities) that I am the owner of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

SECTION II. Tank Handling Information

Facility ID Number 51 - 33624

DEP Tank ID Number(s) 005A, 006A, 007A, 029A, 030A, 033A, 034A, 035A, 036A, 037A, 039A, 046A

Yes	N/A		
		1.	Briefly describe the excavation and initial on-site staging of uncontaminated/contaminated soil and debris: Removed tank and piping debris was segregated and loaded into roll-off containters during demolition.
		2.	Briefly describe the method of piping system closure and the closure of the piping systems including the quantity and condition of the piping:
		3.	Briefly describe the condition of the tanks and any problems encountered during tank handling or tank removal activities:
		4.	Briefly describe the method used to purge the tanks of and monitor for hazardous or explosive vapors:
☒	☐	5.	If tanks were cleaned on-site: a. Briefly describe the tank cleaning process: Tanks were drained, cut open, rinsed and scrubbed clean of any residuals before demolition. b. If subcontracted, name and address of company that performed the tank cleaning: NorthStar Contracting Group, Inc., 2250 East Adams Avenue, Philadelphia, PA 19124
☐	☒	6.	If tanks were “Closed-in-Place”, briefly describe how tanks were rendered inoperative, marked permanently closed with date, vented and secured to prevent unauthorized entry:
☐	☒	7.	If contamination was suspected or observed, the “Notification of Contamination” form was submitted.

I, KRISTIAN SATTERTHWAITE, hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to
(Print Name)
unsworn falsification to authorities) that I am the certified remover who performed the tank handling activities associated with the closure of the above referenced storage tank(s) and that the information provided by me in this closure report (Section I) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 029A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 046A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 034A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

Facility Name and ID: -

County:

Township/Borough: See attached Figure

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 006A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 035A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 036A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 037A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 007A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills): _____

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 039A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 033A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

_____ ----→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

_____

_____

_____

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 030A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

ABOVEGROUND STORAGE TANK SYSTEM CLOSURE REPORT FORM

SECTION III. Site Assessment Information

Tank Registration # 005A (complete one sheet for EACH tank system and attach ALL laboratory sheets pertaining to that system)

Facility ID Number 51 - 33624

A. Provide depth of *BEDROCK* and *WATER* IF encountered during excavation or soil boring (write "N/A": if NOT encountered).

Bedrock N/A feet below land surface Water 15 feet below land surface

B. Provide Length of *PIPING* IF piping was closed-in-place (write "N/A" if NOT closed-in-place).

Length of piping N/A feet

C. TANK SYSTEM REMOVED FROM THE GROUND/SITE

1). Was obvious contamination observed while excavating, sampling or removing the tank system?

☒ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records ----→ Do not complete item C.2. below.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

---→ Complete item C.2. below.

2). Was contamination localized (within three feet of the tank system in every direction with no obvious water contamination)?

☐ YES ----→ Remove or remediate contaminated soil ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ NO ----→ Continue Interim Remedial Actions ----→ See end of this section for options on submission and maintenance of closure records.

D. TANK SYSTEM CLOSED-IN-PLACE OR CHANGED-IN-SERVICE

Was obvious contamination observed during sampling, boring or assessing water depths?

☐ NO ----→ Conduct confirmatory sampling ----→ See end of this section for options on submission and maintenance of closure records.

☐ YES ----→ Report release to DEP within 24 hours ----→ Describe contamination observed and likely source(s) (tank, piping, dispenser, spills, overfills):

Continue with corrective action ----→ See end of this section for options on submission and maintenance of closure records.

E. If the answer to C.1. is "no", the answer to C.2. is "yes" or the answer to D. is "no", confirmatory samples are required. Use the sample/analysis information sheet on page 10 of 11 to provide the information on confirmatory sampling and complete the diagram on Page 11 of 11.

Options for Submission and Maintenance of Closure Site Assessment Records

Records of the site assessment must be maintained for at least three years after completion of permanent closure or change-in-service in one of the following ways:

(a) By the owners and operators who took the tank system out of service;
(b) By the current owners and operators of the tank system site; or
(c) By mailing these records to the DEP regional office responsible for the county in which the tank is located if they cannot be maintained at the closed facility.

Where the results of the site assessment indicate that obvious, localized soil contamination was encountered and the analytical results of the confirmatory sampling show levels below the statewide standard/action levels, this closure report form (Sections I, II, and III) or some other acceptable site characterization report must be received by the Department within 180 days of verbally reporting the release.

Where the results of the site assessment indicate that no obvious contamination or obvious, localized contamination was encountered, but the analytical results of the confirmatory sampling show levels above the statewide standard/action levels, or where there is obvious, extensive contamination, Section 245.310(a)(8) of the Corrective Action Process (CAP) regulations requires that details of removal from service be included in the site characterization report. A copy of the completed closure report form should be submitted as part of the site characterization report to satisfy the requirements of Section 245.310(a)(8) of the CAP regulations.

I, Kevin Long , hereby certify, under penalty of law as provided in 18 Pa. C.S. §4904 (relating to unsworn
(Print Name)
falsification to authorities) that I am the person who performed the site assessment activities associated with the closure of the above referenced storage tank system(s) and that the information provided by me in this closure report (Section III) is true, accurate and complete to the best of my knowledge and belief.

Kevin L. Long

[1] Where EPA Method 5035 is used, indicate sample collection option in the right-hand box of this column using the following codes:

P - Samples placed in a soil sample vial with a preservative present.
E - Samples collected and stored in a soil collection device which is airtight and affords little to no headspace.

N - Samples placed in soil sample vial without a preservative present.

Site Location and Sampling Map - Use this page or suitable facsimile to provide a large-scale map of the site where storage tank systems were closed. Scales between 1" = 10 and 1" = 100 feet frequently work well. Include the following information as each applies to the site: facility name and I.D., county, township or borough, property boundaries or area of interest, buildings, roads and streets with names or route numbers, utilities, location and ID number of storage tank systems removed including piping and dispensers, soil stockpile locations, excavations or other locations of product recovery, north arrow, approximate map scale and legend. Also, show depth and location of samples with sample ID numbers cross-referenced to the same ID numbers shown on Page 10 of 11.

PES Project Load Ticket

#S12010

Load Ticket: 16330

Date: 09-29-21

Scrap

Sold to: Allegheny

Location: Tank 116-117

Carrier: Allegheny

Steel / Ferrous

- ☐ No. 1 P+S
- ☐ No. 2 Heavy Melt
- ☐ Cast Iron
- ☐ Mixed
- ☐ Pipe
- ☐ Light Iron
- ☐ Re-Bar
- ☐ Other Tank Plate

Non-Ferrous

- ☐ Insulated Copper Wire
- ☐ No. 1 Copper Wire
- ☐ Brass
- ☐ Aluminum
- ☐ Stainless, Grade_____
- ☐ Other Alloy, Grade_____
- ☐ Mixed
- ☐ Other: _____

Condition

- ☐ Prepared
- ☐ Unprepared
- ☐ Green Waste
- ☐ Concrete
- ☐ Masonry
- ☐ Mixed Masonry
- ☐ Wood Only
- ☐ Demo Debris (C&D)
- ☐ Dirt / Fill
- ☐ Sand Fill
- ☐ Crushed Stone
- ☐ Other:_____

Scale Ticket #:_____

Gross Weight: 67180 lbs

Tare Weight: 40460 lbs

Net Weight: 26720 lbs

NorthStar Rep. Signature:_____

Received By:_____

Non-Haz / ACM / Special Waste

Activity Location:_____

Waste Stream

- ☐ C&D Demolition Debris
- ☐ Non-Friable ACM
- ☐ Friable ACM
- ☐ PB WWTP Sludge
- ☐ GP WWTP Sludge
- ☐ Characteristic Haz Waste (flammable D001, corrosive D002, reactive D003, toxicity D004 –D043)
- ☐ Process Haz Waste
- ☐ Demo Debris (C&D)
- ☐ Non-Haz Waste (Solid)
- ☐ Non-Haz Waste (Liquid)
- ☐ PCB (Non-TSCA)
- ☐ PCB (TSCA)

Disposition of residual Liquid/ Tank Bottoms

Tank #	Primary Product	Reg. #	AMS #	Temp Out of Service or CIP Date	Removal Date	HSM Ship Date	Sold as Product	Remarks
GP 250	LCO	019A	P-009	10/9/2020	9/29/2021	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 251	Distillate, Untreated	020A	P-010	8/26/2020	9/29/2021	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 494	Main Frac Bottoms	029A	P-039	T -9/17/2021	4/14/2022	Yes	N/A	Multiple Shipping Dates Managed as HSM and shipped by Rail to WM (see Shipment #'s 11 thru 15)
GP 767	Recovered Oil	046A	P-135	T - 11/16/2020	7/8/2022	N/A	N/A	Tank had approx. 1800 gallons of product that was transferred to PB 191 and subsequently sold and shipped by barge - sludge stablized and shipped by Rail to WM (see Shipment #11)
GP 790	Benzene	034A	P-017	T-11/04/2019	2/21/2020	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 791	Benzene	006A	P-018	T-11/04/2019	2/21/2022	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 792	Cumene	035A	P-019	T - 4/22/2020	2/21/2022	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 793	Cumene	036A	P-020	T - 4/24/2020	2/21/2022	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 794	Tetraethylene Glycol	037A	P-153	T - 11/6/2020	2/21/2022	N/A	Yes	Direct load to tank truck and sold to PBF - Residuals product was transferred after sale to 796 / washwater and residuals were fed to the GP WWTP to augment
GP 795	Benzene	N/A	P-021	T- 7/24/2009	2/21/2022	N/A	Yes	Flow Thru Oprocess Tank Exempt from PADEP Registration Tank
GP 796	Spent Tetraethylene Glycol	038A	P-154	T- 8/26/2021	8/26/2021	N/A	N/A	Tank was RCRA Empty - Residual material and washwater were Drained to the GP WWTP to augment dwindling food source
GP 798	Benzene	007A	P-022	T - 11/22/2019	2/21/2022	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 799	Benzene	039A	P-023	T - 8/3/2017	2/21/2022	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP 1088	*Fresh Caustic	033A	N/A	T - 10/15/2021	7/8/2022	N/A	Yes	Consolidated with other fresh Caustic into GP 973 and Sold to PBF Wash Water was drained at the bundle pad (BOL's to be posted)
GP 1116	Udex feed	030A	P-001	T- 12/19/2019	10/4/2021	N/A	N/A	Tank was empty and air gapped at turnover in June 2020
GP1117	Udex feed	005A	P-024	T- 2/6/2014	10/4/2021	N/A	N/A	Tank was empty and air gapped at turnover in June 2020

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp.	
Per:	Date: 7/15/21	Per: Luis Castro	Date: 7/16/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry *to* its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp.	
Per:	Date: 7/15/21	Per: Luis Castro	Date: 7/16/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 49, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp.	
Per:	Date: 7/15/21	Per: Luis Castro	Date: 7/16/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 b Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp.	
Per:	Date: 7/15/21	Per: Luis Castro	Date: 7/16/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 49, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp		
Per:	[signature]	Date: 7/23/21	Per: Luis Castro		Date: 7/26/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 7/23/21	Per: Luis Castro	Date: 7/26/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry *to* its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date:	Per: Luis Castro	Date: 7/26/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Transportation	
Per:	Date: 7/28/21	Per: Luis Castro	Date: 7/30/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9. Code of Federal Regulations. Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Transportation	
Per:	Date: 7/28/21	Per: Luis Castro	Date: 7/30/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Transportation	
Per:	Date: 7/28/21	Per: Luis Castro	Date: 7/30/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 49, Code of Federal Regulations. Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bills of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Transportation	
Per:	Date: 7/28/21	Per: Luis Castro	Date: 7/30/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 49 Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC			Carrier: CSX Railroad Corp		
Per:	[signature]	Date: 8/4/21	Per: Luis Castro		Date: 8/6/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 8/4/21	Per: Luis Castro	Date: 8/6/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 8/4/21	Per: Luis Castro	Date: 8/6/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on BVs of Lading 172.201(a)(1) (ii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC		Carrier: CSX Railroad Corp	
Per:	Date: 8/4/21	Per: Luis Castro	Date: 8/6/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9, Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9. Code of Federal Regulations. Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC

Per: Date: 8/19/21

Carrier: CSX Railroad Corp

Per: Luis Castro Date: 8/19/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (iii) of Title 4 9. Code of Federal Regulations, Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

RECEIVED subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of packages unknown), marked consigned and destined as indicated above which said carrier (the word carrier being understood through this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery as said destination. If on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any said property, that every service to be performed hereunder shall be subject to all the Bill of Lading terms and conditions in the governing classification on the date of shipment. Shipper hereby certifies that he is familiar with all the Bill of Lading terms and conditions in the governing classification and the said terms and conditions.

Shipper: PHILADELPHIA ENERGY SOLUTIONS R&M LLC

Per: [signature] Date: 8/11/21

Carrier: CSX Railroad Corp

Per: Luis Castro Date: 8/19/21

Mark with "X" or "RQ" if appropriate to designate Hazardous Materials Substances as defined in the Department of Transportation Regulations governing the transportation of hazardous materials. The use of this column is an optional method for identifying hazardous materials on Bills of Lading 172.201(a)(1) (ii) of Title 4 9. Code of Federal Regulations. Also, when shipping hazardous materials, the shipper's certification statement prescribed in section 172.204(a) of the Federal Regulations, as indicated on the Bill of Lading does apply, unless a specific exception from the requirement is provided in the Regulation for a particular material.

Definitions/Glossary

Client: Ransom Consulting LLC
Project/Site: PES Refinery

Job ID: 680-223928-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Revision
Per client request, the sample ID's have been revised.

Comments
No additional comments.

Receipt
The samples were received on 10/25/2022 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.7º C.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Creator: Harley, Tynisha

List Source: Eurofins Savannah

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

The test results in this report meet NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted. Results pertain only to samples listed in this report. This report may not be reproduced, except in full, without the written approval of the laboratory. Questions should be directed to the person who signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the {0} Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

July 25, 2022: The Client IDs were amended on L2238159-01 through -14.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2238159-01D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (131%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238159-02: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (156%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238159-03D: The surrogate recovery is outside the method acceptance criteria for dibromofluoromethane (65%) due to interference with the Internal Standard.

L2238159-07D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (166%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238159-08D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (136%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238159-09: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (232%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238159-09: The surrogate recovery is outside the method acceptance criteria for dibromofluoromethane (68%) due to interference with the Internal Standard.

Project Name:	PHILADELPHIA REFINERY	**Lab Number:**	L2238159
Project Number:	200.00135.006	**Report Date:**	07/25/22

Case Narrative (continued)

L2238159-10: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (216%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.
L2238159-11D: The surrogate recovery is outside the method acceptance criteria for dibromofluoromethane (63%) due to interference with the Internal Standard.
L2238159-12: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (249%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.
L2238159-13D: The surrogate recovery is outside the acceptance criteria for toluene-d8 (146%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.
L2238159-13D: The surrogate recovery is outside the method acceptance criteria for dibromofluoromethane (46%) due to interference with the Internal Standard.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Melissa Sturgis

Project Number:	200.00135.006	**Report Date:**	07/25/22

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	PHILADELPHIA REFINERY	**Lab Number:**	L2238159
Project Number:	200.00135.006	**Report Date:**	07/25/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	PHILADELPHIA REFINERY	**Lab Number:**	L2238159
Project Number:	200.00135.006	**Report Date:**	07/25/22

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**

FORM NO: 01-01(A)(I)
(rev. 5-JAN-12)

PADEP Short List Analytical Suites per Table III-5:

1. Leaded Gasoline, Aviation Gasoline and Jet Fuel - benzene, toluene, ethyl benzene, xylenes (total), cumene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,2-dichloroethane, 1,2-dibromoethane, lead

2. Unleaded Gasoline - benzene, toluene, ethyl benzene, xylenes (total), cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene

3. Kerosene, Fuel Oil No. 1 - benzene, toluene, ethyl benzene, cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene

4. Diesel Fuel and Fuel Oil No. 2 - benzene, toluene, ethyl benzene, cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethyl benzene

5. Fuel Oil Nos. 4, 5, and 6, and Lubricating Oils and Fluids - benzene, naphthalene, fluorene, anthracene, phenanthrene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(g,h,i)perylene

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number: 200.00135.006 **Report Date:** 07/25/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2238160-15: A sample identified as "TB-071822" was listed on the Chain of Custody, but not received. This was verified by the client.

Volatile Organics

L2238160-04D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2238160-04D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (216%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238160-06: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (1300%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238160-09: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (194%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2238160-11: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (318%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Total Metals

L2238160-01-03: The sample has an elevated detection limit for lead due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Steven Gniadek

Project Number:	200.00135.006	**Report Date:**	07/25/22

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	PHILADELPHIA REFINERY	**Lab Number:**	L2238160
Project Number:	200.00135.006	**Report Date:**	07/25/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	PHILADELPHIA REFINERY	**Lab Number:**	L2238160
Project Number:	200.00135.006	**Report Date:**	07/25/22

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

FORM NO. 01-01(rev.8)

PADEP Short List Analytical Suites per Table III-5:

1. Leaded Gasoline, Aviation Gasoline and Jet Fuel - benzene, toluene, ethyl benzene, xylenes (total), cumene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,2-dichloroethane, 1,2-dibromoethane, lead

2. Unleaded Gasoline - benzene, toluene, ethyl benzene, xylenes (total), cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene

3. Kerosene, Fuel Oil No. 1 - benzene, toluene, ethyl benzene, cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene

4. Diesel Fuel and Fuel Oil No. 2 - benzene, toluene, ethyl benzene, cumene, methyl tert-butyl ether, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethyl benzene

5. Fuel Oil Nos. 4, 5, and 6, and Lubricating Oils and Fluids - benzene, naphthalene, fluorene, anthracene, phenanthrene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(g,h,i)perylene

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2241030-06: The collection date and time on the chain of custody was 01-AUG-22 11:50; however, the collection date/time on the container label was 01-AUG-22 17:50. At the client's request, the collection date/time is reported as 01-AUG-22 11:50.

L2241030-07: The collection date and time on the chain of custody was 01-AUG-22 12:00; however, the collection date/time on the container label was 01-AUG-22 12:30. At the client's request, the collection date/time is reported as 01-AUG-22 12:00.

L2241030-14: The collection date and time on the chain of custody was 01-AUG-22 14:00; however, the collection date/time on the container label was 01-AUG-22 14:50. At the client's request, the collection date/time is reported as 01-AUG-22 14:00.

Volatile Organics

L2241030-04D and -09D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
